### 1. Supplementary Tables and Notes

These tables and notes are provided in this document.

• Supplementary Table 1	Description of studies contributing to trans-ancestry meta-analysis: ancestry group and country of origin, sample size, data collection methods, and birth weight summaries and exclusions.	4
• Supplementary Table 2	Description of studies contributing to trans-ancestry meta-analysis: genotyping, quality control, pre-phasing, imputation, and association analysis.	7
• Supplementary Table 3	BW association summary statistics for each component of the trans-ancestry meta-analysis of 153,781 individuals for lead SNPs at loci attaining genome-wide significance ( $P<5\times 10^{-8}$ ).	10
• Supplementary Table 4	Summary statistics for lead SNPs attaining genome-wide significant evidence ( $P<5\times 10^{-8}$ ) of association with BW in European ancestry meta-analysis of up to 143,677 individuals and/or trans-ancestry meta-analysis of up to 153,781 individuals.	19
• Supplementary Table 5	Loci with multiple distinct association signals attaining genome-wide significance ( $P<5\times 10^{-8}$ ) in approximate conditional meta-analysis of 143,677 individuals of European ancestry, using 5,000 white British participants from UK Biobank as a reference for linkage disequilibrium.	24
• Supplementary Table 6	Candidate gene(s) at birth weight loci.	25
• Supplementary Table 7	Summary of 99% credible sets at 62 distinct autosomal association signals.	29
• Supplementary Table 8	BW credible set enrichment for DNase1 hypersensitive sites.	31
• Supplementary Table 9	Genetic variance explained.	34
• Supplementary Table 10	Look-up of maternal genotype effect on offspring BW (unadjusted for fetal genotype) in up to 68,254 mothers for the 60 BW loci detected in fetal birth weight GWAS.	35
• Supplementary Table 11	Maternal and fetal conditional analyses in 12,909 ALSPAC mother-child pairs.	37
• Supplementary Table 12	Summary results of LD Score regression analyses between birth weight and various diseases, metabolic and anthropometric traits.	39

• Supplementary Table 13	Estimating the proportion of the BW-adult phenotype covariance attributable to genotyped SNPs in UK Biobank and the Northern Finland Birth Cohort (NFBC) 1966 data.	43
• Supplementary Table 14	List of 77 reported imprinted regions used in the current analysis.	46
• Supplementary Table 15	Comparison of variance in BW between individuals heterozygous and homozygous for each of the 59 autosomal BW index SNPs (plus <i>DLK1</i> ) in 57,715 UK Biobank samples.	48
• Supplementary Table 16	Parent-of-origin specific analysis at 59 autosomal BW loci (plus <i>DLK1</i> ) in 4,908 ALSPAC mother-child pairs.	50
• Supplementary Table 18	Effect of transmitted and untransmitted maternal haplotype scores on BW in 5,201 ALSPAC mother-child pairs.	52
• Supplementary Table 19	Reciprocal approximate conditional analyses at <i>YKT6-GCK</i> variants associated with birth weight (BW) or fasting glucose (FG), in European ancestry meta-analysis of up to 143,677 individuals.	53
• Supplementary Figure 1	BW association enrichment for DNaseI hypersensitive (DHS) sites in 128 cell types and four genic annotations.	54
• Supplementary Figure 2	Estimates of phenotypic, genetic and residual correlations ( <b>a</b> ) and estimates of genetic and residual covariance ( <b>b</b> ) between birth weight and adult metabolic or anthropometric traits in UK Biobank ‘white-British’ samples (up to N=57,715).	55
• Full grants and funding supports for contributing studies and CHARGE Consortium Hematology Working Group		56
• Grants and funding supports for individuals		61
• Study acknowledgements		63
• Membership of CHARGE Consortium Hematology Working Group		66
• Membership of EGG Consortium		68

## 2. Supplementary Data

These table (excel spreadsheet) and plots (pdf file) are provided in separate documents.

- Supplementary Table 17 Association of BW signals with various adult metabolic and anthropometric traits.  
(GWAS look-ups)

- 60 regional plots for birth weight association

**Supplementary Table 1. Description of studies contributing to trans-ancestry meta-analysis: ancestry group and country of origin, sample size, data collection methods, and birth weight summaries and exclusions.**

(a) Component 1: European ancestry GWAS

Study	Ancestry group	Country of origin	Year(s) of birth	Sample size (M/F)	Data collection	Phenotype exclusions	Mean (SD) birth weight (grams)			Median (IQR) GA (week) at delivery
							Males	Females	Combined	
1958 British Birth Cohort	European	UK	1958	4,595 (2,320/2,275)	Measured by midwives; supplemented with obstetric records and interviews with mothers	Multiple births, GA <37 weeks	3439 (484)	3277 (468)	3359 (483)	40 (39-41)
ALSPAC <sup>a,b</sup>	European	UK	~1992	7,285 (3,722/3,563)	Identified from obstetric data, records from the ALSPAC measurers, and birth notification	Multiple births, GA <37 weeks, 5 SD winsorisation	3553 (491)	3423 (450)	3490 (476)	40 (40-41)
CHOP-Caucasian	European	USA	1988-present	9,405 (5,040/4,365)	Questionnaire and medical records	Multiple births, GA <37 weeks (when available)	3447 (582)	3343 (549)	3398 (569)	N/A
CoLaus	European	Switzerland	1928-1970	2,089 (892/1,197)	Self-reported as adults	N/A	3490 (668)	3250 (661)	3352 (675)	N/A

Chr, chromosome; bp, base pair; EAF, effect allele frequency; SE, standard error.

<sup>a</sup>Status indicates whether the SNP was lead in European ancestry (EUR) or trans-ancestry (TA) meta-analysis. Previous denotes previously reported lead SNP<sup>5</sup> at established loci.

**Supplementary Table 5. Loci with multiple distinct association signals attaining genome-wide significance ( $P<5\times10^{-8}$ ) in approximate conditional meta-analysis of 143,677 individuals of European ancestry, using 5,000 white British participants from UK Biobank as a reference for linkage disequilibrium.**

(b) Six categorical fields from ENCODE tested for enrichment in a joint model

Annotation	Lower 95% CI <sup>a</sup>	Effect <sup>a</sup>	Upper 95% CI <sup>a</sup>
Neonatal DHS	0.60	1.59	2.40
Fetal DHS	0.57	1.43	2.37
Genic	-0.85	0.63	1.61
Stem_cell DHS	-1.35	0.09	1.04
Adult DHS	-1.12	-0.26	0.62
Embryonic DHS	-3.95	-1.49	-0.39

<sup>a</sup>Estimated effects of enrichment and 95% CI are natural log transformed. We considered an annotation enriched if the 95% CI of the estimated effects of enrichment did not overlap zero.

**Supplementary Table 9. Genetic variance explained.**

Study	N	By 62 known and novel SNPs		By 55 novel SNPs	
		Variance explained	SE	Variance explained	SE
HAPO	1338	0.020	0.011	0.013	0.010
NFBC1966	5402	0.029	0.007	0.020	0.006
Generation R	2537	0.049	0.013	0.026	0.009

SE, standard error. HAPO study is independent of the birth weight meta-analysis whilst NFBC1966 and Generation R (European component) are part of the meta-analysis.

**Supplementary Table 10. Look-up of maternal genotype effect on offspring BW (unadjusted for fetal genotype) in up to 68,254 mothers for the 60 BW loci detected in fetal birth weight GWAS.**

SE, standard error, EAF, effect allele frequency. The lead SNPs at *MTNR1B*, *HMGA2* and *L3MBTL3* attained genome-wide significance in the maternal, as well as the fetal GWAS. <sup>a</sup>Fetal GWAS effect sizes subtracted from maternal GWAS effect size: 55/60 beta values were more positive in the fetal GWAS (aligned to BW-raising allele) than in the maternal GWAS (2-tailed binomial sign test  $P=1\times 10^{-11}$ ).

**Supplementary Table 11. Maternal and fetal conditional analyses in 12,909 mother-child pairs.**

Locus	Index variant	EA/ NEA	Maternal effect on offspring birth weight						Fetal effect on birth weight					
			Unadjusted			Adjusted for fetal genotype			Unadjusted			Adjusted for maternal genotype

<sup>a</sup>The number of case/control was T2D: 1,488/55,166, CAD: 1,959/55,756, obesity1: 19,820/13,802, obesity2: 4,026/13,802, obesity3: 1,146/13,802, overweight: 37,631/19,820, asthma: 7,131/50,584, ever smoker: 24,774/32,186, and former smoker: 18,721/32,186 The covariance for these traits were on the observed scale.

<sup>b</sup>We have put N/A (not applicable) when the genetic and residual covariances are in the opposite direction and it is not relevant to calculate gcov/(gcov + rcov). Although genetic covariance is subject to high uncertainty, there is a general pattern across both UK Biobank and the NFBC1966 that the phenotypic covariation between low BW and future cardiometabolic risk is at least in part genetically mediated.

**Supplementary Table 14.** List of 77 reported imprinted regions used in the current analysis.

The beta value is a parameter of the Brown-Forsythe test that measures how different the mean absolute deviations (MADs) are from the respective group medians in the heterozygous vs the homozygous group. SE, standard error.

**Supplementary Table 16. Parent-of-origin specific analysis at 59 autosomal BW loci (plus *DLK1*) in 4,908 ALSPAC mother-child pairs.**

EA, effect allele; NEA, non effect allele; SE, standard error; *P\_het*, *P*-value for difference in BW between AB heterozygote offspring inheriting allele A from mother and B from father, and those inheriting A from father and B from mother.

**Supplementary Table 17. Association of BW signals with various adult metabolic and anthropometric traits. (GWAS look-ups)**

Provided in a separate Excel file.

**Supplementary Table 18. Effect of transmitted and untransmitted maternal haplotype scores on BW in 5,201 ALSPAC mother-child pairs.**

Haplotype score	Height			Systolic blood pressure			Type 2 diabetes		
	$\beta$	SE	P-value	$\beta$	SE	P-value	$\beta$	SE	P-value
M1 (C1)	0.128	0.013	1.6x10 <sup>-21</sup>	-6.82	3.36	0.04	-0.44	1.73	0.80
M2	0.010	0.012	0.39	-6.40	2.63	0.02	1.66	1.42	0.24
C2	0.066	0.012	1.2x10 <sup>-7</sup>	0.14	2.62	0.96	-2.94	1.47	0.045

Beta values are in grams per weighted trait-raising allele. SE, standard error.

M1(C1), maternal transmitted haplotype score; M2, Maternal untransmitted haplotype score; C2, paternal transmitted haplotype score.

**Supplementary Table 19. Reciprocal approximate conditional analyses at *YKT6-GCK* variants associated with birth weight (BW) or fasting glucose (FG), in European ancestry meta-analysis of up to 143,677 individuals.**

Variant (chr:position in build 37)	Type	EA/ NEA	EAF (Eur)	BW SNP conditioned on FG SNP				FG SNP conditioned on BW SNP

EA, effect allele; NEA, non effect allele; EAF, effect allele frequency; Eur, European; BW, birth weight; FG, fasting glucose; T2D, type 2 diabetes.

1. Horikoshi, M. et al. *PLoS Genet.* **11**, e1005230 (2015).

2. Dupuis, J. et al. *Nat. Genet.* **42**, 105-116 (2010).

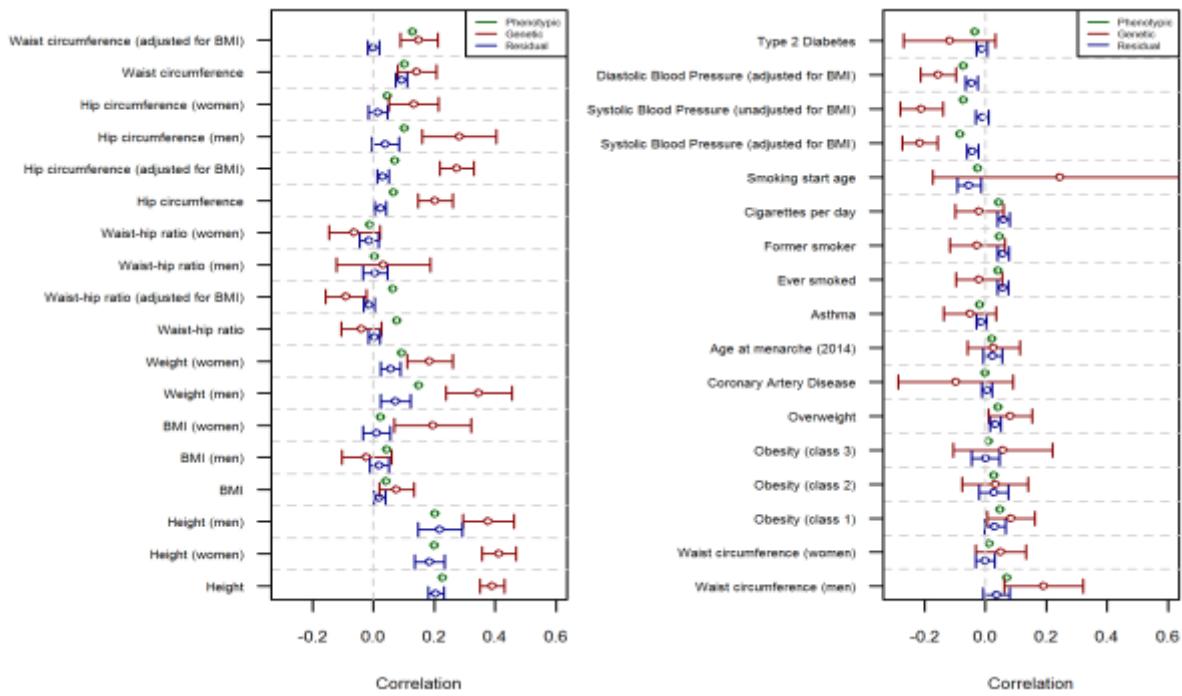

3. Morris, A. P. et al. *Nat. Genet.* **44**, 981-990 (2012).

**Supplementary Figure 1. BW association enrichment for DNaseI hypersensitive (DHS) sites in 128 cell types and four genic annotations.** **a**, Each cell type DHS annotation and four gene-based annotations were individually tested for enrichment using the Bayes Factors for all variants in the 62 credible sets. The effect estimate (filled circle) and 95% CI (horizontal line) are plotted on the x axis. The 128 cell types (listed on the y axis; see Supplementary Table 8 for details) are categorised according to the description fields from ENCODE (stem cell, neonatal, foetal, embryonic and adult groups). We considered an annotation enriched if the 95% CI did not overlap zero (highlighted in red). **b**, Estimated effect of enrichment (filled circle) and 95% CI (horizontal line) for each categorical field, tested in a joint model, are plotted (see Methods).

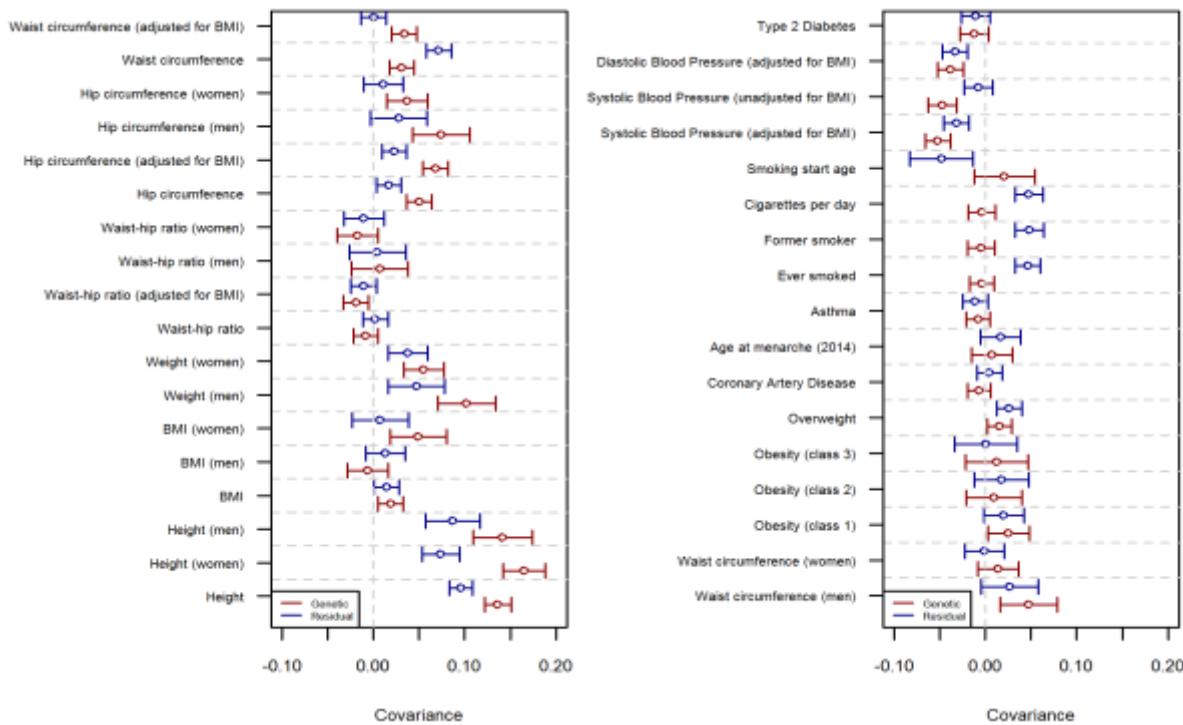

**Supplementary Figure 2. Estimates of phenotypic, genetic and residual correlations (a) and estimates of genetic and residual covariance (b) between birth weight and adult metabolic or anthropometric traits in UK Biobank ‘white British’ samples (up to N=57,715). See details in Supplementary Table 13.**

## Full grants and funding supports for contributing studies.

**1958 British Birth Cohort** acknowledges use of phenotype and genotype data from the British 1958 Birth Cohort DNA collection, funded by the Medical Research Council grant G0000934 and the Wellcome Trust grant 068545/Z/02. Genotyping for the B58C-WTCCC subset was funded by the Wellcome Trust grant 076113/B/04/Z. The B58C-T1DGC genotyping utilised resources provided by the Type 1 Diabetes Genetics Consortium, a collaborative clinical study sponsored by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), National Institute of Allergy and Infectious Diseases (NIAID), National Human Genome Research Institute (NHGRI), National Institute of Child Health and Human Development (NICHD), and Juvenile Diabetes Research Foundation International (JDRF) and supported by U01 DK062418. B58C-T1DGC GWAS data were deposited by the Diabetes and Inflammation Laboratory, Cambridge Institute for Medical Research (CIMR), University of Cambridge, which is funded by Juvenile Diabetes Research Foundation International, the Wellcome Trust and the National Institute for Health Research Cambridge Biomedical Research Centre; the CIMR is in receipt of a Wellcome Trust Strategic Award (079895). The B58C-GABRIEL genotyping was supported by a contract from the European Commission Framework Programme 6 (018996) and grants from the French Ministry of Research.

**ALSPAC** is supported by the UK Medical Research Council and the Wellcome Trust (Grant ref: 102215/2/13/2), and the University of Bristol provide core support for ALSPAC.

**Barcelona Supercomputing Center** This work has been sponsored by the grant SEV-2011-00067 of Severo Ochoa Program, awarded by the Spanish Government. This work was supported by an EFSD/Lilly research fellowship.

**CHOP** was financially supported by an Institute Development Award from the Children's Hospital of Philadelphia, a Research Development Award from the Cotswold Foundation, NIH grant R01 HD056465 and the Daniel B. Burke Endowed Chair for Diabetes Research (SFAG).

**CLHNS** was supported by National Institutes of Health grants DK078150, TW05596 and HL085144 and pilot funds from RR20649, ES10126, and DK056350.

The **CoLaus** study was and is supported by research grants from GlaxoSmithKline, the Faculty of Biology and Medicine of Lausanne, and the Swiss National Science Foundation (grants 33CSCO-122661, 33CS30-139468 and 33CS30-148401).

**COPSACs** greatly acknowledge the private and public research funding allocated to COPSAC and listed on [www.copsac.com](http://www.copsac.com), with special thanks to The Lundbeck Foundation; Ministry of Health; Danish Council for Strategic Research; The Danish Council for Independent Research and The Capital Region Research Foundation as core supporters. The funding agencies did not have any influence on study design, data collection and analysis, decision to publish or preparation of the manuscript. No pharmaceutical company was involved in the study.

**DNBC** was established with the support of a major grant from the Danish National Research Foundation. Additional support for the DNBC has been obtained from the Danish Pharmacists' Fund, the Egmont Foundation, the March of Dimes Birth Defects Foundation, the Augustinus Foundation and the Health Fund of the Danish Health Insurance Societies. The generation of GWAS genotype data for the DNBC samples was carried out within the GENEVA consortium with funding provided through the NIH Genes, Environment and Health Initiative (GEI) (U01HG004423, U01HG004438, U01HG004446).

**EPIC-Norfolk** is supported by Cancer Research UK (SP2024-0201 and SP2024-0204) and the Medical Research Council (G9502233).

The **ERF** study as a part of EUROSPAN (European Special Populations Research Network) was supported by European Commission FP6 STRP grant number 018947 (LSHG-CT-2006-01947) and also received funding from the European Community's Seventh Framework Programme (FP7/2007-2013)/grant agreement HEALTH-F4-2007-201413 by the European Commission under the programme "Quality of Life and Management of the Living Resources" of 5th Framework Programme (no. QLG2-CT-2002-01254). The ERF study was further supported by ENGAGE consortium and Center for Medical Systems Biology (CMSB). High-throughput analysis of the ERF data was supported by joint grant from Netherlands Organisation for Scientific Research and the Russian Foundation for Basic Research (NWO-RFBR 047.017.043).

The **Fenland** Study is funded by the Medical Research Council (MC\_U106179471) and Wellcome Trust.

The general design of **Generation R** Study is made possible by financial support from the Erasmus Medical Center, Rotterdam, the Erasmus University Rotterdam, the Netherlands Organization for Health Research and Development (ZonMw), the Netherlands Organisation for Scientific Research (NWO), the Ministry of Health, Welfare and Sport and the Ministry of Youth and Families.

**GOYA** study was conducted as part of the activities of the Gene-diet Interactions in Obesity project (GENDINOB, [www.gendinob.dk](http://www.gendinob.dk)) and the MRC Integrative Epidemiology Unit at the University of Bristol (MC\_UU\_12013/1-9).

**HAPO** was supported by US National Institutes of Health (NIH) grants (HD34242, HD34243, HG004415, and DK099820) and by the American Diabetes Association.

**HBCS** received financial support from the Academy of Finland (project grants 120315, 129287, 218029 and 267561).

**Hong Kong HAPO follow-up study** was supported by Research Grant Council General Research Fund (CU473408, CU471713) and CUHK Faculty of Medicine Outstanding Fellowship.

**INMA** study was funded by grants from Instituto de Salud Carlos III (Red INMA G03/176 and CB06/02/0041), FIS-FEDER 03/1615, 04/1509, 04/1112, 04/1931, 05/1079, 05/1052, 06/1213, 07/0314, 09/02647, 11/01007, 11/02591, 13/02032, 13/1944, PI041436, PI081151, 11/00178, 97/0588, 00/0021-2, PI061756, PS0901958, 14/00891, and 14/01687, Spanish Ministry of Science and Innovation (SAF2008-00357), European Commission (ENGAGE project and grant agreement HEALTH-F4-2007-201413), Fundació La Marató de TV3, Generalitat de Catalunya-CIRIT 1999SGR 00241 and Conselleria de Sanitat Generalitat Valenciana. Part of the DNA extractions and genotyping was performed at the Spanish National Genotyping Centre (CEGEN-Barcelona).

**Inter99** The Novo Nordisk Foundation Center for Basic Metabolic Research is an independent Research Center at the University of Copenhagen partially funded by an unrestricted donation from the Novo Nordisk Foundation ([www.metabol.ku.dk](http://www.metabol.ku.dk)). The study was financially supported by research grants from the Danish Research Council, the Danish Centre for Health Technology Assessment, Novo Nordisk Inc., Research Foundation of Copenhagen County, Ministry of Internal Affairs and Health, the Danish Heart Foundation, the Danish Pharmaceutical Association, the Augustinus Foundation, the Ib Henriksen Foundation, the Becket Foundation, and the Danish Diabetes Association.

**Leipzig-Childhood-Obesity** was supported by grants from Integrated Research and Treatment Center (IFB) Adiposity Diseases 01EO1001, from the German Research Foundation for the Collaborative Research Center CRC1085 "Atherobesity" project C05, and by the European Commission (Beta-JUDO n° 279153).

The **NEO** study is supported by the participating Departments, the Division and the Board of Directors of the Leiden University Medical Center, and by the Leiden University, Research Profile Area Vascular and Regenerative Medicine.

**The Northern Finland Birth Cohort (NFBC)** Research program, including the study of the NFBC 1966 and 1986 studies, received financial support from Academy of Finland (1114194, 24300796), NHLBI grant 5R01HL087679 through the STAMPEED program (1RL1MH083268-01), ENGAGE project and grant agreement HEALTH-F4-2007-201413, the Medical Research Council (grant G0500539, centre grant G0600705, PrevMetSyn), and the Wellcome Trust (project grant GR069224), UK. The program is currently being funded by the H2020-633595 DynaHEALTH action and Academy of Finland EGEA-project.

**NTR** obtained funding from the Netherlands Organization for Scientific Research (NWO: MagW/ZonMW grants 916-76-125, 904-61-090, 985-10-002, 904-61-193, 480-04-004, 400-05-717, 481-08-011, 451-04-034, 463-06-001, 912-10-020, Addiction- 31160008 Middelgroot-911-09-032, Spinozapremie 56-464-14192), Center for Medical Systems Biology (CMSB, NWO Genomics), NBIC/BioAssist/RK(2008.024), Biobanking and Biomolecular Resources Research Infrastructure (BBMRI-NL), the VU University's Institute for Health and Care Research (EMGO+) and Neuroscience Campus Amsterdam (NCA), the European Science Foundation (ESF, EU/QLRT-2001-01254), the European Community's Seventh Framework Program (FP7/2007-2013), ENGAGE (HEALTH-F4-2007-201413); the European Research Council (ERC Advanced, 230374), Rutgers University Cell and DNA Repository (National Institute of Mental Health (NIMH) U24 MH068457-06), and the National Institutes of Health (NIH, R01D0042157-01A; 1RC2MH089995-01; R01DK092127-01). Part of the genotyping and analyses were funded by the Genetic Association Information Network (GAIN) of the Foundation for the US National Institutes of Health, and by grants from GAIN and the NIMH (MH081802).

**ORCADES** was supported by the Chief Scientist Office of the Scottish Government (CZB/4/276 and CZB/4/710), the Royal Society, the MRC Human Genetics Unit, Arthritis Research UK and the European Union framework program 6 EUROSPAN project (contract no. LSHG-CT-2006-018947).

The **PANIC** study has been financially supported by grants from Ministry of Social Affairs and Health of Finland, Ministry of Education and Culture of Finland, Finnish Innovation Fund Sitra, Social Insurance Institution of Finland, Finnish Cultural Foundation, Juho Vainio Foundation, Foundation for Paediatric Research, Paavo Nurmi Foundation, Paulo Foundation, Diabetes Research Foundation, Research Committee of the Kuopio University Hospital Catchment Area (State Research Funding), Kuopio University Hospital (EVO funding number 5031343) and the city of Kuopio.

**RAINE** study was supported by the National Health and Medical Research Council of Australia (grant numbers 572613, 403981 and 003209) and the Canadian Institutes of Health Research (grant number MOP-82893).

**SCORM** was funded by National Medical Research Foundation, Singapore (NMRC/0975/2005) and Biomedical Research Council, Singapore (BMRC 06/1/21/19/466).

**SORBS** was supported by grants from the German Research Council (DFG - SFB 1052 "Obesity mechanisms"; A01, B01, B03, C01 and SPP 1629 TO 718/2-1), from the German Diabetes Association and from the DHFD (Diabetes Hilfs- und Forschungsfonds Deutschland).

**STRIP** was supported by Academy of Finland (grants 206374, 251360 and 276861); Juho Vainio Foundation; Finnish Cardiac Research Foundation; Finnish Cultural Foundation; Finnish Ministry of Education and Culture; Sigrid Juselius Foundation; Yrjö Jahnsson Foundation; C.G. Sundell Foundation;

Special Governmental Grants for Health Sciences Research, Turku University Hospital; Foundation for Pediatric Research; and Turku University Foundation.

**TEENAGE** study has been co-financed by the European Union (European Social Fund (ESF)) and Greek national funds through the Operational Program “Education and Lifelong Learning” of the National Strategic Reference Framework (NSRF)—Research Funding Program: Heracleitus II. Investing in knowledge society through the European Social Fund. This work was funded by the Wellcome Trust (098051).

**TDCOB** received supports from the Danish Innovation Foundation and The Region Zealand Health and Medical Research Foundation. This study was partly supported by grants from the Program Committee for Individuals, Disease and Society of the Danish Innovation Foundation (grant numbers: 0603-00484B and 0603-00457B) and was part of the research activities in The Impact of our Genomes on Individual Treatment Response in Obese Children (TARGET, [www.target.ku.dk](http://www.target.ku.dk)) and the Indo-Danish bi-lateral project, Genetics and Systems Biology of Childhood Obesity in India and Denmark (BioChild, [www.biochild.ku.dk](http://www.biochild.ku.dk)).

The Novo Nordisk Foundation Center for Basic Metabolic Research, an independent Research Center at the University of Copenhagen, partially funded by an unrestricted donation from the Novo Nordisk Foundation.

**University of Oxford**, UK, was funded by the British Heart Foundation (grant code SP/13/2/30111), the European Commission (ENGAGE: HEALTH-F4-2007-201413), Medical Research Council (G0601261), and the Wellcome Trust (090532, 098381). The research was supported by the National Institute for Health Research (NIHR) Oxford Biomedical Research Centre Programme. The views expressed are those of the author(s) and not necessarily those of the NHS, the NIHR or the Department of Health.

The **Young Finns Study** has been financially supported by the Academy of Finland: grants 286284 (T.L.), 134309 (Eye), 126925, 121584, 124282, 129378 (Salve), 117787 (Gendi), and 41071 (Skidi); the Social Insurance Institution of Finland; Kuopio, Tampere and Turku University Hospital Medical Funds (grant X51001 for T.L.); Juho Vainio Foundation; Paavo Nurmi Foundation; Finnish Foundation of Cardiovascular Research (T.L.); Finnish Cultural Foundation; Tampere Tuberculosis Foundation (T.L.); Emil Aaltonen Foundation (T.L.); and Yrjö Jahnsson Foundation (T.L.).

### **Grants and funding supports for CHARGE Consortium Hematology Working Group**

**AGES** Funding for Age, Gene/Environment Susceptibility Reykjavik Study (AGES) was made possible by NIA/NIH contract AG000932-2 (2009) Characterization of Normal Genomic Variability. AGES is funded by NIH contract N01-AG-12100, the NIA Intramural Research Program, Hjartavernd (the Icelandic Heart Association) and the Althingi (the Icelandic Parliament).

**ARIC** The Atherosclerosis Risk in the Communities Study is carried out as a collaborative study supported by National Heart, Lung, and Blood Institute contracts (HHSN268201100005C, HHSN268201100006C, HHSN2682 01100007C, HHSN268201100008C, HHSN268201100009C, HHSN268201100010C, HHSN268201100011C and HHSN268 201100012C), R01HL087641, R01HL59367 and R01HL086694; National Human Genome Research Institute contract (U01HG 004402) and National Institutes of Health contract (HHSN 268200625226C). Infrastructure was partly supported by grant number UL1RR025005, a component of the National Institutes of Health and NIH Roadmap for Medical Research. ARIC is also supported by University of North Carolina at Chapel Hill (funded by N01-HC-55015), Baylor Medical College (N01- HC-55016), University of Mississippi Medical Center (N01-HC- 55021), University of

Minnesota (N01-HC-55019), Johns Hopkins University (N01-HC-55020), University of Texas Houston (N01-HC- 55017) and University of North Carolina (N01-HC-55018).

**CHS** Cardiovascular Health Study research was supported by NHLBI contracts HHSN268201200036C, HHSN268200800007C, N01HC55222, N01HC85079, N01HC85080, N01HC85081, N01HC85082, N01HC85083, N01HC85086; and NHLBI grants U01HL080295, R01HL087652, R01HL105756, R01HL103612, and R01HL120393 with additional contribution from the National Institute of Neurological Disorders and Stroke (NINDS). Additional support was provided through R01AG023629 from the National Institute on Aging (NIA). A full list of principal CHS investigators and institutions can be found at CHS - NHLBI.org. The provision of genotyping data was supported in part by the National Center for Advancing Translational Sciences, CTSI grant UL1TR000124, and the National Institute of Diabetes and Digestive and Kidney Disease Diabetes Research Center (DRC) grant DK063491 to the Southern California Diabetes Endocrinology Research Center.

**FHS** The National Heart, Lung, and Blood Institute's Framingham Heart Study is a joint project of the National Institutes of Health and Boston University School of Medicine and was supported by the National Heart, Lung, and Blood Institute's Framingham Heart Study (contract No. N01-HC-25195) and its contract with Affymetrix for genotyping services (contract No. N02-HL-6-4278). Analyses reflect the efforts and resource development from the Framingham Heart Study investigators participating in the SNP Health Association Resource (SHARe) project. A portion of this research was conducted using the Linux Cluster for Genetic Analysis (LinGA-II) funded by the Robert Dawson Evans Endowment of the Department of Medicine at the Boston University School of Medicine and Boston Medical Center.

**Rotterdam Study** The generation and management of GWAS genotype data for the Rotterdam Study (RS I, RS II, RS III) was executed by the Human Genotyping Facility of the Genetic Laboratory of the Department of Internal Medicine, Erasmus MC, Rotterdam, The Netherlands. The GWAS datasets are supported by the Netherlands Organisation of Scientific Research NWO Investments (nr. 175.010.2005.011, 911-03-012), the Genetic Laboratory of the Department of Internal Medicine, Erasmus MC, the Research Institute for Diseases in the Elderly (014-93-015; RIDE2), the Netherlands Genomics Initiative (NGI)/Netherlands Organisation for Scientific Research (NWO) Netherlands Consortium for Healthy Aging (NCHA), project nr. 050-060-810. The Rotterdam Study is funded by Erasmus Medical Center and Erasmus University, Rotterdam, Netherlands Organization for the Health Research and Development (ZonMw), the Research Institute for Diseases in the Elderly (RIDE), the Ministry of Education, Culture and Science, the Ministry for Health, Welfare and Sports, the European Commission (DG XII), and the Municipality of Rotterdam.

**The InChianti Study** was supported as a 'targeted project' (ICS 110.1RS97.71) by the Italian Ministry of Health, by the US National Institute on Aging (contracts N01-AG-916413, N01- AG-821336, 263 MD 9164 13 and 263 MD 821336) and in part by the Intramural Research Program, National Institute on Aging and National Institutes of Health, USA.

## Grants and funding supports for individuals

R.N.B. is funded by the Wellcome Trust and Royal Society (grant: 104150/Z/14/Z). N.M.W. is supported by a National Health and Medical Research Council Early Career Fellowship (APP1104818), a University of Queensland Early Career Researcher Grant (2014002959) and a University of Western Australia - University of Queensland Bilateral Research Collaboration Award (2014001711). B.F. is supported by an Oak Foundation fellowship and by a grant from the Novo Nordisk Foundation (12955). N.R.v.Z. has received salary support from the Innovative Medicines Initiative and the Juvenile Diabetes Research Foundation. T.S.A. was funded by the Gene-Diet Interactions in Obesity (GENDINOB) project and acknowledges the same. N.V-T. is funded by a pre-doctoral grant from the Agència de Gestió d'Ajuts Universitaris i de Recerca (2015 FI\_B 00636), Generalitat de Catalunya. V.L. and I.P. were funded in part through the European Union's Seventh Framework Programme (FP7/2007–2013), ENGAGE project, grant agreement HEALTH-F4-2007-201413. L.A.D received a College of Medical, Veterinary and Life Sciences Medical Research Council Doctoral Training Grant Scholarship (G0900185-1/1). J.M.M. was supported by Sara Borrell Fellowship from the Instituto Carlos III and Beatriu de Pinós fellowship from the Agency for Management of University and Research Grants (AGAUR). N.R. is funded by the Medical Research Council, UK (MR/K011480/1). S.K.G. was supported by a grant from the Doris Duke Charitable Foundation and HL122684. S.E.J. is funded by the Medical Research Council (grant: MR/M005070/1). M.A.T. is supported by a Wellcome Trust Institutional Strategic Support Award (WT097835MF). J.T. is funded by a Diabetes Research and Wellness Foundation Fellowship. A.R.W. and T.M.F. are supported by the European Research Council grant: 323195 SZ-245 50371-GLUCOSEGENES-FP7-IDEAS-ERC. I.P. is supported by Elsie Widdowson fellowship from the Imperial College London, UK. S.B-G. was FI-DGR Fellowship from FIDGR 2013 from Agència de Gestió d'Ajuts Universitaris i de Recerca (AGAUR, Generalitat de Catalunya). G.H. works within the MRC Integrative Epidemiology Unit at the University of Bristol (MC\_UU\_12013/1-9). G.M. is supported by core ALSPAC funding Grant ref: 102215/2/13/2). S.M.M. was partly funded by a Research Councils UK Fellowship. E.Z. is supported by the Wellcome Trust (098051). H.N.K. is awarded EU-FP7 Marie Curie Actions - Career Integration Grant (CIG-293511). S.S. and M-R.J. have received funding from the European Union's Horizon 2020 research and innovation programme [under grant agreement No 633595] for the DynaHEALTH action. A.T.H. is a Wellcome Trust Senior Investigator (098395/Z/12/Z) and an NIHR Senior Investigator (NF-SI-0611-10219). P.V. received funding from the Swiss National Science Foundation (grant no: 33CSCO-122661 and FN 33CSC0-139468), GlaxoSmithKline and the Faculty of Biology and Medicine of Lausanne, Switzerland, to conduct the CoLaus study. D.M-K. was supported by Dutch Science Organization (ZonMW-VENI Grant 916.14.023). C.Pisinger is funded by the Health Foundation (Helsefonden). C.Power at UCL Institute of Child Health, with support from the National Institute for Health Research Biomedical Research Centre at Great Ormond Street Hospital for Children NHS Foundation Trust and University College London. B.R.W. is funded by British Heart Foundation and the Wellcome Trust. V.W.V.J. received an additional grant from the Netherlands Organization for Health Research and Development (NWO, ZonMw-VIDI 016.136.361) and a European Research Council Consolidator Grant (ERC-2014-CoG-648916). S.F.A.G. is funded by the Daniel B. Burke Endowed Chair for Diabetes Research. D.A.L. works within the MRC Integrative Epidemiology Unit at the University of Bristol (MC\_UU\_12013/5). G.D.S. works within the MRC Integrative Epidemiology Unit at the University of Bristol (MC\_UU\_12013/1). A.P.M. is a Wellcome Trust Senior Research Fellow (grant number WT098017) and acknowledges funding under WT090532 and WT064890. J.F.F. has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 633595 for the DynaHEALTH action. N.J.T. works within the MRC Integrative Epidemiology Unit at the University of Bristol (MC\_UU\_12013/3). D.M.E. is funded by an Australian Research Council Future Fellowship (FT130101709) and works within the MRC Integrative Epidemiology Unit at the University of Bristol (MC\_UU\_12013/4). M.I.M. is a Wellcome Trust Senior Investigator (grant number 098381) and a

NIHR Senior Investigator. R.M.F. is a Sir Henry Dale Fellow (Wellcome Trust and Royal Society grant: 104150/Z/14/Z).

## **Study acknowledgements**

**ALSPAC** We are extremely grateful to all the families who took part in this study, the midwives for their help in recruiting them, and the whole ALSPAC team, which includes interviewers, computer and laboratory technicians, clerical workers, research scientists, volunteers, managers, receptionists and nurses. GWAS data were generated by Sample Logistics and Genotyping Facilities at the Wellcome Trust Sanger Institute and LabCorp (Laboratory Corporation of America) using support from 23andMe.

**Barcelona Supercomputing Center** acknowledges PRACE for awarding us access to MareNostrum supercomputer, based in Spain at Barcelona.

**CHOP** authors thank the network of primary care clinicians and the patients and families for their contribution to this project and to clinical research facilitated by the Pediatric Research Consortium (PeRC) at The Children's Hospital of Philadelphia. R. Chiavacci, E. Dabaghyan, A. (Hope) Thomas, K. Harden, A. Hill, C. Johnson-Honesty, C. Drummond, S. Harrison, F. Salley, C. Gibbons, K. Lilliston, C. Kim, E. Frackelton, G. Otieno, K. Thomas, C. Hou, K. Thomas and M.L. Garris provided expert assistance with genotyping and/or data collection and management. The authors would also like to thank S. Kristinsson, L.A. Hermannsson and A. Krisbjörnsson of Raförninn ehf for extensive software design and contributions.

**CLHNS** We thank the USC-Office of Population Studies Foundation, Inc. research and data collection teams and the study participants who generously provided their time for this study.

**COPSAC2000, COPSAC2010 and COPSAC-REGISTRY** gratefully express our gratitude to the participants of the COPSAC2000, COPSAC2010 and COPSAC-REGISTRY cohort study for all their support and commitment. We also acknowledge and appreciate the unique efforts of the COPSAC research team.

**DNBC** We are very grateful to all the women and children taking part in the DNBC.

**EPIC-Norfolk** We thank all EPIC-Norfolk study participants and staff for their contribution to the study.

**ERF** We are grateful to all study participants and their relatives, general practitioners and neurologists for their contributions and to P. Veraart for her help in genealogy, J. Vergeer for the supervision of the laboratory work and P. Snijders for his help in data collection.

**Fenland** We are grateful to all the volunteers for their time and help, and to the General Practitioners and practice staff for assistance with recruitment. We thank the Fenland Study Investigators, Fenland Study Co-ordination team and the Epidemiology Field, Data and Laboratory teams.

**The Generation R Study** is conducted by the Erasmus Medical Center in close collaboration with the School of Law and Faculty of Social Sciences of the Erasmus University Rotterdam, the Municipal Health Service Rotterdam area, Rotterdam, the Rotterdam Homecare Foundation, Rotterdam and the Stichting Trombosedienst & Artsenlaboratorium Rijnmond (STAR-MDC), Rotterdam. We gratefully acknowledge the contribution of children and parents, general practitioners, hospitals, midwives and pharmacies in Rotterdam. The study protocol was approved by the Medical Ethical Committee of the Erasmus Medical Center, Rotterdam. Written informed consent was obtained for all participants. The generation and management of GWAS genotype data was executed by the Human Genotyping Facility of the Genetic Laboratory of the Department of Internal Medicine, Erasmus MC, Rotterdam, the Netherlands. We thank Pascal Arp, Mila Jhamai, Marijn Verkerk, Lizbeth Herrera and Marjolein Peters for their help in creating, managing and QC of the GWAS database. Also Karol Estrada and Carolina Medina-Gomez for their support in creation and analysis of imputed data. We would like to thank Anis Abuseiris, Karol Estrada, Dr. Tobias A. Knoch, and Rob de Graaf as well as their institutions Biophysical Genomics, Erasmus MC Rotterdam, The Netherlands, and especially the national German MediGRID and Services@MediGRID part

of the German D-Grid, both funded by the German Bundesministerium fuer Forschung und Technology under grants #01 AK 803 A-H and # 01 IG 07015 G for access to their grid resources.

**GINIplus&LISApplus** We thank all families for participation in the studies and the LISApplus and GINIplus study teams for their excellent work. The GINIplus study team wishes to acknowledge the following: Helmholtz Zentrum Muenchen - German Research Center for Environmental Health, Institute of Epidemiology I, Munich (Heinrich J, Brüske I, Schulz H, Standl M, Thiering E, Tiesler CMT, Chen C-M, Schnappinger M); Department of Pediatrics, Marien-Hospital, Wesel (Berdel D, von Berg A); Department of Pediatrics, Ludwig Maximilians University, Munich (Koletzko S); Department of Pediatrics, Technical University, Munich (Bauer CP, Hoffmann U); IUF – Leibniz Research Institute for Environmental Medicine, Düsseldorf (Krämer U, Link E, Cramer C). The LISApplus study team wishes to acknowledge the following: Helmholtz Zentrum Muenchen - German Research Center for Environment and Health, Institute of Epidemiology I, Neuherberg (Heinrich J, Brüske I, Schulz H, Standl M, Thiering E, Tiesler CMT, Chen C-M, Schnappinger M); Department of Pediatrics, Marien-Hospital, Wesel (von Berg A); Bad Honnef (Schaaf B); UFZ-Centre for Environmental Research Leipzig-Halle, Department of Environmental Immunology (Lehmann I); IUF – Leibniz Research Institute for Environmental Medicine, Düsseldorf (Krämer U); Department of Pediatrics, Technical University, Munich (Bauer CP, Hoffman U).

**GOYA** We thank all the participants of the study.

**The Helsinki Birth Cohort Study (HBCS/HBCS 1934-44)** thanks Professor David Barker and Tom Forsen. The DNA extraction, sample quality control, biobank up-keep and aliquotting were performed at the National Institute for Health and Welfare, Helsinki, Finland.

**INMA** authors are grateful to Silvia Fuchs, Anna Sánchez, Maribel López, Nuria Pey, Muriel Ferrer, Amparo Quiles, Sandra Pérez, Gemma León, Elena Romero, María Andreu, Nati Galiana, María Dolores Climent and Amparo Cases for their assistance in contacting the families and administering the questionnaires. The authors would particularly like to thank all the participants for their generous collaboration. A full roster of the INMA Project Investigators can be found at [http://www.proyecto-inma.org/presentacion-inma/listado-investigadores/en\\_listado-investigadores.html](http://www.proyecto-inma.org/presentacion-inma/listado-investigadores/en_listado-investigadores.html).

**Inter99 study** We thank all participants and our committed staff.

**Leipzig-Childhood-Obesity** are grateful to all the patients and families for contributing to the study. We highly appreciate the support of the Obesity Team and Auxo Team of the Leipzig University Children's Hospital for management of the patients and to the Pediatric Research Center Lab Team for support with DNA banking.

The authors of the **NEO study** thank all individuals who participated in the Netherlands Epidemiology in Obesity study, all participating general practitioners for inviting eligible participants and all research nurses for collection of the data. We thank the NEO study group and Ingeborg de Jonge for the coordination and data management of the NEO study. The genotyping in the NEO study was supported by the Centre National de Génotypage (Paris, France), headed by Jean-François Deleuze.

**NFBC 1966 and 1986** We thank the late professor Paula Rantakallio (launch of NFBC1966), the participants in the 31- and 46-years-old study and the NFBC project center. We thank professor Anna-Liisa Hartikainen (launch of NFBC1986), the participants in the study and the NFBC project center.

**NTR** We would like to thank all twins and their families whom are cooperating in our research. We would like to thank the Avera Human Genetics research lab for their close collaboration, DNA typing and sample logistics.

**ORCADES** DNA extractions were performed at the Wellcome Trust Clinical Research Facility in Edinburgh. We would like to acknowledge the invaluable contributions of Lorraine Anderson and the research nurses in Orkney, the administrative team in Edinburgh and the people of Orkney.

**PANIC** We are grateful to the children and their parents for participating in the PANIC study and to the whole research team for their contribution in carrying out the study.

**RAINE** authors are grateful to the Raine Study participants and their families, and to the Raine Study research staff for cohort coordination and data collection. The authors gratefully acknowledge the NH&MRC for their long term contribution to funding the study over the last 25 years and also the following Institutions for providing funding for Core Management of the Raine Study: The University of Western Australia (UWA), Raine Medical Research Foundation, UWA Faculty of Medicine, Dentistry and Health Sciences, Telethon Kids Institute and Women and Infants Research Foundation (King Edward Memorial Hospital), Curtin University and Edith Cowan University. The authors gratefully acknowledge the assistance of the Western Australian DNA Bank (National Health and Medical Research Council of Australia National Enabling Facility). This work was supported by resources provided by the Pawsey Supercomputing Centre with funding from the Australian Government and the Government of Western Australia.

**TDCOB** The Danish Childhood Obesity Biobank would like to thank all children, youths, and their families for participation in the studies and thus providing opportunities to detect novel insights in regards to childhood obesity.

**TEENAGE** We would like to thank all study participants and their families as well as all volunteers for their contribution in this study. We thank the following staff from the Sample Management and Genotyping Facilities at the Wellcome Trust Sanger Institute for sample preparation, quality control and genotyping: Dave Jones, Doug Simpkin, Emma Gray, Hannah Blackburn and Sarah Edkins.

**YFS** gratefully acknowledge the expert technical assistance in the statistical analyses by Ville Aalto and Irina Lisinen.

**CHARGE Consortium Hematology Working Group** Details of the acknowledgements are described in Ganesh et al, *Nat Genet* (2009)<sup>80</sup>.

**UK Biobank** This study has been conducted using the UK Biobank Resource.

1. Department of Nutrition, University of North Carolina, Chapel Hill, NC 27599, USA.
2. COPSAC, Copenhagen Prospective Studies on Asthma in Childhood, Herlev and Gentofte Hospital, University of Copenhagen, Copenhagen, 2820 Gentofte, Denmark.
3. The Novo Nordisk Foundation Center for Basic Metabolic Research, Section of Metabolic Genetics, Faculty of Health and Medical Sciences, University of Copenhagen, Copenhagen, DK-2100, Denmark.
4. Steno Diabetes Center, Gentofte, DK-2820, Denmark.
5. Department of Clinical Sciences, Diabetes and Endocrinology, Lund University Diabetes Centre, Malmö, 205 02, Sweden.
6. School of Women's and Infants' Health, The University of Western Australia, Perth, WA 6009, Australia.
7. Institute of Biomedicine, Physiology, University of Eastern Finland, Kuopio, FI-70211, Finland.

8. Department of Obstetrics and Gynecology, Sahlgrenska University Hospital, Gothenburg, 41685, Sweden.
9. Institute of Biomedical and Clinical Science, University of Exeter Medical School, University of Exeter, Royal Devon and Exeter Hospital, Exeter, EX2 5DW, UK.
10. Swiss Institute of Bioinformatics, Lausanne, CH-1015, Switzerland.
11. Department of Epidemiology and Biostatistics, School of Public Health, Imperial College London, London, W2 1PG, UK.
12. Netherlands Twin Register, Department of Biological Psychology, Vrije Universiteit, Amsterdam, 1081 BT, the Netherlands.
13. USC-Office of Population Studies Foundation, Inc., University of San Carlos, Cebu City, 6000, Philippines.
14. Department of Nutrition and Dietetics, University of San Carlos, Cebu City, 6000, Philippines.
15. Center for Applied Genomics, The Children's Hospital of Philadelphia, Philadelphia, PA 19104, USA.
16. Center for Genomic Regulation (CRG), Barcelona, 08003, Spain.
17. ISGlobal, Centre for Research in Environmental Epidemiology (CREAL), Barcelona, 08003, Spain.
18. Universitat Pompeu Fabra (UPF), Barcelona, 08002, Spain.
19. CIBER de Epidemiología y Salud Pública (CIBERESP), Madrid, 28029, Spain.
20. Centre for Environmental and Preventive Medicine, Wolfson Institute of Preventive Medicine, Queen Mary University of London, London, EC1M 6BQ, UK.
21. Institute for Molecular Bioscience, University of Queensland, Brisbane, QLD 4072, Australia.
22. MRC Lifecourse Epidemiology Unit, Faculty of Medicine, University of Southampton, Southampton, SO16 6YD, UK.
23. Institute for Molecular Medicine, Finland (FIMM), University of Helsinki, Helsinki, FI-00014, Finland.
24. Division of Human Genetics, The Children's Hospital of Philadelphia, Philadelphia, PA 19104, USA.
25. Department of Genetics, Perelman School of Medicine, University of Pennsylvania, Philadelphia, PA 19104, USA.
26. Department of Primary Care and Public Health, Imperial College London, Hammersmith, W6 6RP, UK.
27. MRC Epidemiology Unit, University of Cambridge School of Clinical Medicine, Cambridge, CB2 0QQ, UK.
28. Department of Nutrition and Dietetics, School of Health Science and Education, Harokopio University, Athens, 17671, Greece.
29. National Institute for Health and Welfare, Helsinki, 00271, Finland.
30. Department of General Practice and Primary Health Care, University of Helsinki and Helsinki University Hospital, Helsinki, 00014, Finland.
31. Folkhälsan Research Center, Helsinki, 00250, Finland.
32. Medical Research Council Integrative Epidemiology Unit at the University of Bristol, Bristol, BS8 2BN, UK.
33. School of Social and Community Medicine, University of Bristol, Bristol, BS8 2BN, UK.
34. The University of Queensland Diamantina Institute, Translational Research Institute, Brisbane, QLD 4102, Australia.
35. Department of Epidemiology Research, Statens Serum Institut, Copenhagen, DK-2300, Denmark.
36. The Generation R Study Group, Erasmus MC, University Medical Center Rotterdam, Rotterdam, 3015 CE, the Netherlands.
37. Department of Epidemiology, Erasmus MC, University Medical Center Rotterdam, Rotterdam, 3015 CE, the Netherlands.
38. Department of Pediatrics, Erasmus MC, University Medical Center Rotterdam, Rotterdam, 3015 CE, the Netherlands.
39. The Children's Obesity Clinic, Department of Pediatrics, Copenhagen University Hospital Holbæk, Holbæk, DK-4300, Denmark.

40. Obesity Prevention Program, Department of Population Medicine, Harvard Medical School and Harvard Pilgrim Health Care Institute, Boston, MA 02215, USA.
41. Department of Pediatrics, Perelman School of Medicine, University of Pennsylvania, Philadelphia, PA 19104, USA.
42. Division of Endocrinology, The Children's Hospital of Philadelphia, Philadelphia, PA 19104, USA.
43. Department of Biological Psychology, Vrije Universiteit Amsterdam, NCA Neuroscience Campus Amsterdam, EMGO+ Institute for Health and Care Research, Amsterdam, 1081 HV, the Netherlands.
44. Department of Pediatrics, University of California San Francisco School of Medicine, San Francisco, CA 94158, USA.
45. Department of Medicine, Division of Endocrinology, Metabolism, and Molecular Medicine, Northwestern University Feinberg School of Medicine, Chicago, IL 60611, USA.
46. Center for Genetic Medicine, Northwestern University Feinberg School of Medicine, Chicago, IL 60611, USA.
47. Department of Anthropology, Northwestern University, Evanston, IL 60208, USA.
48. Department of Child and Adolescent Psychiatry, Psychosomatics and Psychotherapy, University Hospital Essen, University of Duisburg-Essen, 45147 Essen, Germany.
49. Institute of Epidemiology I, Helmholtz Zentrum München-German Research Center for Environmental Health, 85764 Neuherberg, Germany.
50. Institute and Outpatient Clinic for Occupational, Social and Environmental Medicine, Inner City Clinic, University Hospital Munich, Ludwig Maximilian University of Munich, 80336 Munich, Germany.
51. KG Jebsen Center for Diabetes Research, Department of Clinical Science, University of Bergen, Bergen, N-5020, Norway.
52. Department of Pediatrics, Haukeland University Hospital, Bergen, N-5021, Norway.
53. Department of Clinical Medicine - Department of Paediatrics, Aarhus University Hospital, Aarhus N, 8200, Denmark.
54. Broad Institute of MIT and Harvard, Cambridge, MA 02142, USA.
55. Department of Medicine, Universite de Sherbrooke, Sherbrooke, QC J1H 5H3, Canada.
56. Institute of Nutritional Sciences, University of Potsdam, D-14558 Potsdam, Germany.
57. IFLb GmbH - Institute for Laboratory Medicine, D-10627 Berlin, Germany.
58. Department of Basic Medicine, Medical College of Hunan Normal University, Changsha, 46000, China.
59. Human Development and Health, Faculty of Medicine, University of Southampton, Southampton, SO16 6YD, UK.
60. Wellcome Trust Centre for Human Genetics, University of Oxford, Oxford, OX3 7BN, UK.
61. Oxford Centre for Diabetes, Endocrinology and Metabolism, University of Oxford, Oxford, OX3 7LE, UK.
62. Biocenter Oulu, University of Oulu, Oulu, 90220, Finland.
63. Population, Policy and Practice, UCL Institute of Child Health, University College London, London, WC1N 1EH, UK.
64. Centre for Population Health Research, School of Health Sciences, and Sansom Institute, University of South Australia, Adelaide, SA 5001, Australia.
65. South Australian Health and Medical Research Institute, Adelaide, SA 5000, Australia.
66. Norwegian Institute of Public Health, Oslo, N-0403, Norway.
67. Department of Obstetrics and Gynecology, Sahlgrenska Academy, University of Gothenburg, Gothenburg, SE 41685, Sweden.
68. Department of Epidemiology and Biostatistics, MRC-PHE Centre for Environment & Health, School of Public Health, Imperial College London, London, W2 1PG, UK.
69. Center for Life Course Health Research, Faculty of Medicine, University of Oulu, Oulu, FI-90014, Finland.

70. Unit of Primary Care, Oulu University Hospital, Oulu, 90220, Finland.
71. Center for Medical Genetics and molecular Medicine, Haukeland University Hospital, Bergen, N-5021, Norway.
72. Department of Genomics of Common Disease, School of Public Health, Imperial College London, London, SW7 2AZ, UK.
73. Groningen Research Institute for Asthma and COPD (GRIAC), University of Groningen, University Medical Center Groningen, Groningen, 9700 RB, the Netherlands.
74. Pediatric Research Center, Department of Women's & Child Health, University of Leipzig, 04103 Leipzig, Germany.
75. IFB Adiposity Diseases, University of Leipzig, 04103 Leipzig, Germany.
76. Department of Child Health, School of Medicine, Cardiff University, Cardiff, CF14 4XN, UK.
77. Institute of Social and Preventive Medicine, Lausanne University Hospital (CHUV), Lausanne, 1010, Switzerland.
78. Department of Clinical Physiology and Nuclear Medicine, Kuopio University Hospital, Kuopio, FI-70029, Finland.
79. Kuopio Research Institute of Exercise Medicine, Kuopio, FI-70100, Finland.
80. Department of Clinical Chemistry, Fimlab Laboratories, Tampere, 33520, Finland.
81. Department of Clinical Chemistry, University of Tampere School of Medicine, Tampere, 33014, Finland.
82. Li Ka Shing Centre for Health Information and Discovery, The Big Data Institute, University of Oxford, Oxford, OX3 7BN, UK.
83. Research Center for Prevention and Health Capital Region, Center for Sundhed, Rigshospitalet – Glostrup, Copenhagen University, Glostrup, DK-2600, Denmark.
84. Department of Medicine and Therapeutics, The Chinese University of Hong Kong, Hong Kong, China.
85. Li Ka Shing Institute of Health Sciences, The Chinese University of Hong Kong, Hong Kong, China.
86. Hong Kong Institute of Diabetes and Obesity, The Chinese University of Hong Kong, Hong Kong, China.
87. Institute of Social and Preventive Medicine, University Hospital of Lausanne, Lausanne, 1010, Switzerland.
88. Estonian Genome Center, University of Tartu, Tartu, 50090, Estonia.
89. Oxford National Institute for Health Research (NIHR) Biomedical Research Centre, Churchill Hospital, Oxford, OX3 7LE, UK.
90. Centre for Genetic Origins of Health and Disease (GOHaD), The University of Western Australia, Crawley, WA 6009, Australia.
91. Department of Clinical Medicine, University of Copenhagen, Copenhagen, DK-2200, Denmark.
92. Department of Medicine, Stanford School of Medicine, Stanford, California, CA 94305, USA.
93. Department of Genetics, University of North Carolina, Chapel Hill, NC 27599, USA.
94. Department of Clinical Epidemiology, Leiden University Medical Center, Leiden, 2333 ZA, the Netherlands.
95. Department of Public Health and Primary Care, Leiden University Medical Center, Leiden, 2333 ZA, the Netherlands.
96. Epidemiology Section, BESC Department, King Faisal Specialist Hospital and Research Centre, Riyadh, 12713, Saudi Arabia.
97. Department of Biostatistics, University of Liverpool, Liverpool, L69 3GA, UK.
98. Department of Pediatrics, University of Iowa, Iowa City, IA 52242, USA.
99. Department of Pediatrics, Turku University Hospital, Turku, 20014, Finland.
100. Department of Physiology, University of Turku, Turku, 20520, Finland.
101. Research Unit for Gynaecology and Obstetrics, Department of Clinical Research, University of Southern Denmark, Odense, 5230, Denmark.

102. William Harvey Research Institute, Barts and the London School of Medicine and Dentistry, Queen Mary University of London, London, EC1M 6BQ, UK.
103. Institute of Psychiatry, Kings College London, London, SE5 8AF, UK.
104. Medical Research Council (MRC), Social, Genetic and Developmental Psychiatry Centre, London, SE5 8AF, UK.
105. Department of Paediatrics, University of Cambridge, Cambridge, CB2 0QQ, UK.
106. Research Centre of Applied and Preventive Cardiovascular Medicine, University of Turku, Turku, FI-20014, Finland.
107. Paavo Nurmi Centre, Sports and Exercise Medicine Unit, Department of Physical Activity and Health, Turku, FI-20014, Finland.
108. Wellcome Trust Sanger Institute, Hinxton, CB10 1HH, UK.
109. Department of Tropical Hygiene, Faculty of Tropical Medicine, Mahidol University, Bangkok, 10400, Thailand.
110. Max Planck Institute for Psycholinguistics, Nijmegen, 6525 XD, the Netherlands.
111. Department of Clinical Physiology and Nuclear Medicine, Turku University Hospital, Turku, 20520, Finland.
112. Center for Cardiovascular Research, Charité - Universitätsmedizin Berlin, 10117 Berlin, Germany.
113. BHF Centre for Cardiovascular Science, University of Edinburgh, Queen's Medical Research Institute, Edinburgh, Scotland, EH16 4TJ, UK.
114. Department of Psychology, Mid Sweden University, Östersund, 83125, Sweden.
115. Division of Endocrinology, Department of Medicine, Boston Children's Hospital, Boston, MA 02115, USA.
116. Department of Genetics, Harvard Medical School, Boston, MA 02115, USA.
117. Center for Basic and Translational Obesity Research, Boston Children's Hospital, Boston, MA 02115, USA.
118. Program in Medical and Population Genetics, Broad Institute of Harvard and MIT, Cambridge, MA 02142, USA.
119. Saw Swee Hock School of Public Health, National University of Singapore, National University Health System, Singapore, 119077, Singapore.
120. Singapore Eye Research Institute, Singapore, 168751, Singapore.
121. Department of Obstetrics and Gynecology, Sahlgrenska University Hospital, Gothenburg, SE-41685, Sweden.
122. Novo Nordisk Foundation Center for Basic Metabolic Research and Department of Public Health, Faculty of Health and Medical Sciences, University of Copenhagen, Copenhagen, DK-2200, Denmark.
123. Institute of Preventive Medicine, Bispebjerg and Frederiksberg Hospital, The Capital Region, Copenhagen, DK-2000, Denmark.
124. Department of Obstetrics and Gynaecology, University of Cambridge, National Institute for Health Research Cambridge Comprehensive Biomedical Research Centre, Cambridge, CB2 0SW, UK.
125. Department of Obstetrics and Gynecology, Erasmus MC, University Medical Center, Rotterdam, 3015 CE, the Netherlands.
126. Population Health Research Institute, St George's University of London, London, Cranmer Terrace, SW17 0RE, UK.
127. IMIM (Hospital del Mar Medical Research Institute), Barcelona, 08003, Spain.
128. Department of Statistics and Applied Probability, National University of Singapore, Singapore, 117546, Singapore.
129. Life Sciences Institute, National University of Singapore, Singapore, 117456, Singapore.
130. Division of Metabolic and Nutritional Medicine, Dr. von Hauner Children's Hospital, University of Munich Medical Center, 80337 Munich, Germany.
131. European Centre for Environment and Human Health, University of Exeter, Truro, TR1 3HD, UK.

132. Department of Internal Medicine, Erasmus MC, University Medical Center Rotterdam, 3015 CE, the Netherlands.
133. Department of Public Health, Academic Medical Center (AMC), University of Amsterdam, Amsterdam, 1100 DD, the Netherlands.
134. Usher Institute for Population Health Sciences and Informatics, University of Edinburgh, Edinburgh, Scotland, EH8 9AG, UK.
135. MRC Human Genetics Unit, Institute of Genetics and Molecular Medicine, University of Edinburgh, Edinburgh, Scotland, EH4 2XU, UK.
