

Figure S2: No effects of doxycycline treatment on HIV-1 infection in parental U2OS cells. U2OS cells were treated with 1 µg/ml doxycycline or left untreated for 24 h before cells were infected with 100 ng p24 VSVG pseudotyped HIV-1 NL4-3 IRES-eGFP. 24 hpi cells were analyzed by flow cytometry. The mean percentage of GFP+ cells from three independent experiments was calculated and the resulting data was normalized to untreated cells (100 %).
