

Supplementary Figure S2. Activation of EGFR in pancreata of 1-week-old mice. (A) Western blot and (B) corresponding densitometrical analyses of pancreata of 1-week-old ERBB4 KO;BKC mice depict enhanced EGFR activation and decreased EGFR expression compared to age-matched BKC mice. GAPDH served as reference protein. Data were analyzed by Student's *t*-test, **P*<0.05.
