Diagnostically exposed groups					
Canadian and Massachusetts TB fluoroscopy cohorts	Tran <i>et al</i> (Tran et al. 2017)	0.18 (0, 0.50) [<0.5 Gy] / 1.16 (0, 27.77) [total]	77,275 (1,945,041)	All circulatory disease ICD9 390-459 All circulatory disease ICD9 390-459: <0.5 Gy Ischemic heart disease ICD9 410-414 Ischemic heart disease ICD9 410-414: < 0.5 Gy Cerebrovascular disease ICD9 430-438 Cerebrovascular disease ICD9 430-438: < 0.5 Gy Hypertensive heart disease ICD9 401-405 Hypertensive heart disease ICD9 401-405: < 0.5 Gy Heart disease apart from hypertensive and IHD ICD9 390-400, 406-410 Heart disease apart from hypertensive and IHD ICD9 390-400, 406-410: < 0.5 Gy All circulatory disease apart from heart and cerebrovascular ICD9 439-459 All circulatory disease apart from heart and cerebrovascular ICD9 439-459: < 0.5 Gy	-0.024 (-0.042, -0.005) ⁱ 0.246 (0.036, 0.469) ⁱ -0.037 (-0.060, -0.013) ⁱ 0.268 (0.003, 0.552) ⁱ -0.014 (-0.067, 0.044) ⁱ 0.441 (-0.119, 1.090) ⁱ -0.035 (-0.152, 0.153) ⁱ 1.121 (-0.351, 3.228) ⁱ -0.010 (-0.064, 0.043) ⁱ -0.226 (-0.679, 0.307) ⁱ 0.055 (-0.028, 0.164) ⁱ 0.507 (-0.322, 1.541) ⁱ

^aestimate derived by fitting a linear model by weighted least squares, applied to the aggregate data provided in Table 5 of Mulrooney *et al.* (Mulrooney et al. 2009). Average cardiac doses of 0, 2.5, 10, 25, and 40 Gy were assumed for the respective groups with the following specified ranges of cardiac doses: 0, 0-4, 5-14, 15-34 Gy, ≥35 Gy.

^bmean dose to heart in 21 persons who died of cardiovascular disease.

^ccumulative mean dose to heart.

^dequivalent dose to heart in 2 Gy fractions (EQD2).

^emean EQD2 dose to heart valves in controls.

^festimate derived by fitting a linear binomial odds model to aggregate numbers of cases and controls, and employing the median EQD2 heart-valve doses by dose group given in Table 4 of Cutter *et al* (Cutter et al. 2015): see Appendix A.

^gmean EQD2 dose to heart in controls.

^hestimate derived by fitting a linear binomial odds model to aggregate numbers of cases and controls, and assuming mean heart doses of 0, 16, 23, 28, 33 Gy for the 0, 1-20, 21-25, 26-30, ≥ 31 Gy mean heart dose groups given in Table 2 of van Nimwegen *et al* (van Nimwegen et al. 2017).

ⁱbased on 5-year lagged lung dose.

Table S2. Estimated excess relative risks of circulatory disease in the Japanese atomic bomb survivors and in other groups with moderate- or low-dose radiation exposure, with mean dose generally < 0.5 Gy. (Adapted from Little and Lipshultz (Little and Lipshultz 2015). All data are in relation to underlying cause of death, unless otherwise indicated.

Cohort/Study	Reference	Mean (range) heart/brain dose, Gy	Persons (person years of follow-up)	Endpoint (mortality unless otherwise indicated)	Excess relative risk Gy ⁻¹ (95% CI)
