

Supplemental Figure S9. PLS-DA scores plot of flavonoid composition of 52 accessions in the presence of UV-A at 20°C (green), UV-A+B at 20°C (yellow), UV-A at 4°C (blue), and UV-A+B at 4°C (red) in environmental simulation chambers, or in the absence of any UV treatment at 20°C in a greenhouse (NA) or at 4°C in a climate chamber (ACC) (Schulz et al. 2015). Data are \log_{10} median transformed averages. Numbers on axes represent the percentage of the total variance explained by the indicated Component.
