Suppl. Fig. 1. Freedom from local progression (FFLP) by treatment group.

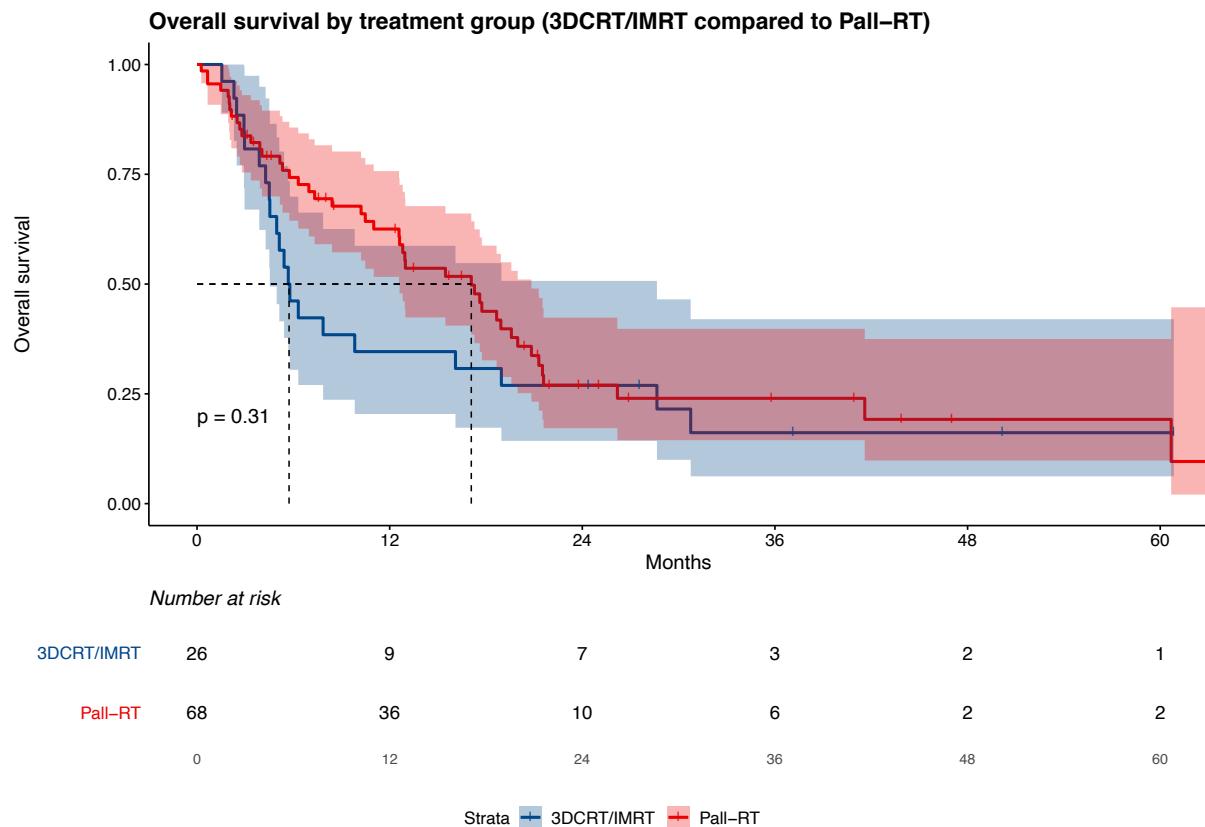

This figure shows a Kaplan-Meier function with freedom from local progression (FFLP) as an endpoint. The curves show 3DCRT/IMRT, Pall-RT, and SBRT groups, respectively. After SBRT, FFLP was significantly higher compared to Pall-RT ($p = 0.026$). No statistically significant difference in FFLP was observed after 3DCRT/IMRT compared to SBRT or after 3DCRT/IMRT compared to Pall-RT (both $p > 0.05$).

Suppl. Fig. 2. Overall survival by treatment group (SBRT vs. pall-RT; $p = 0.041$)

Suppl. Fig. 3. Overall survival by treatment group (SBRT vs. 3DCRT/IMRT; $p = 0.0028$)

Suppl. Fig 4. Overall survival by treatment group (3DCRT/IMRT vs. pall-RT; no significant difference)
