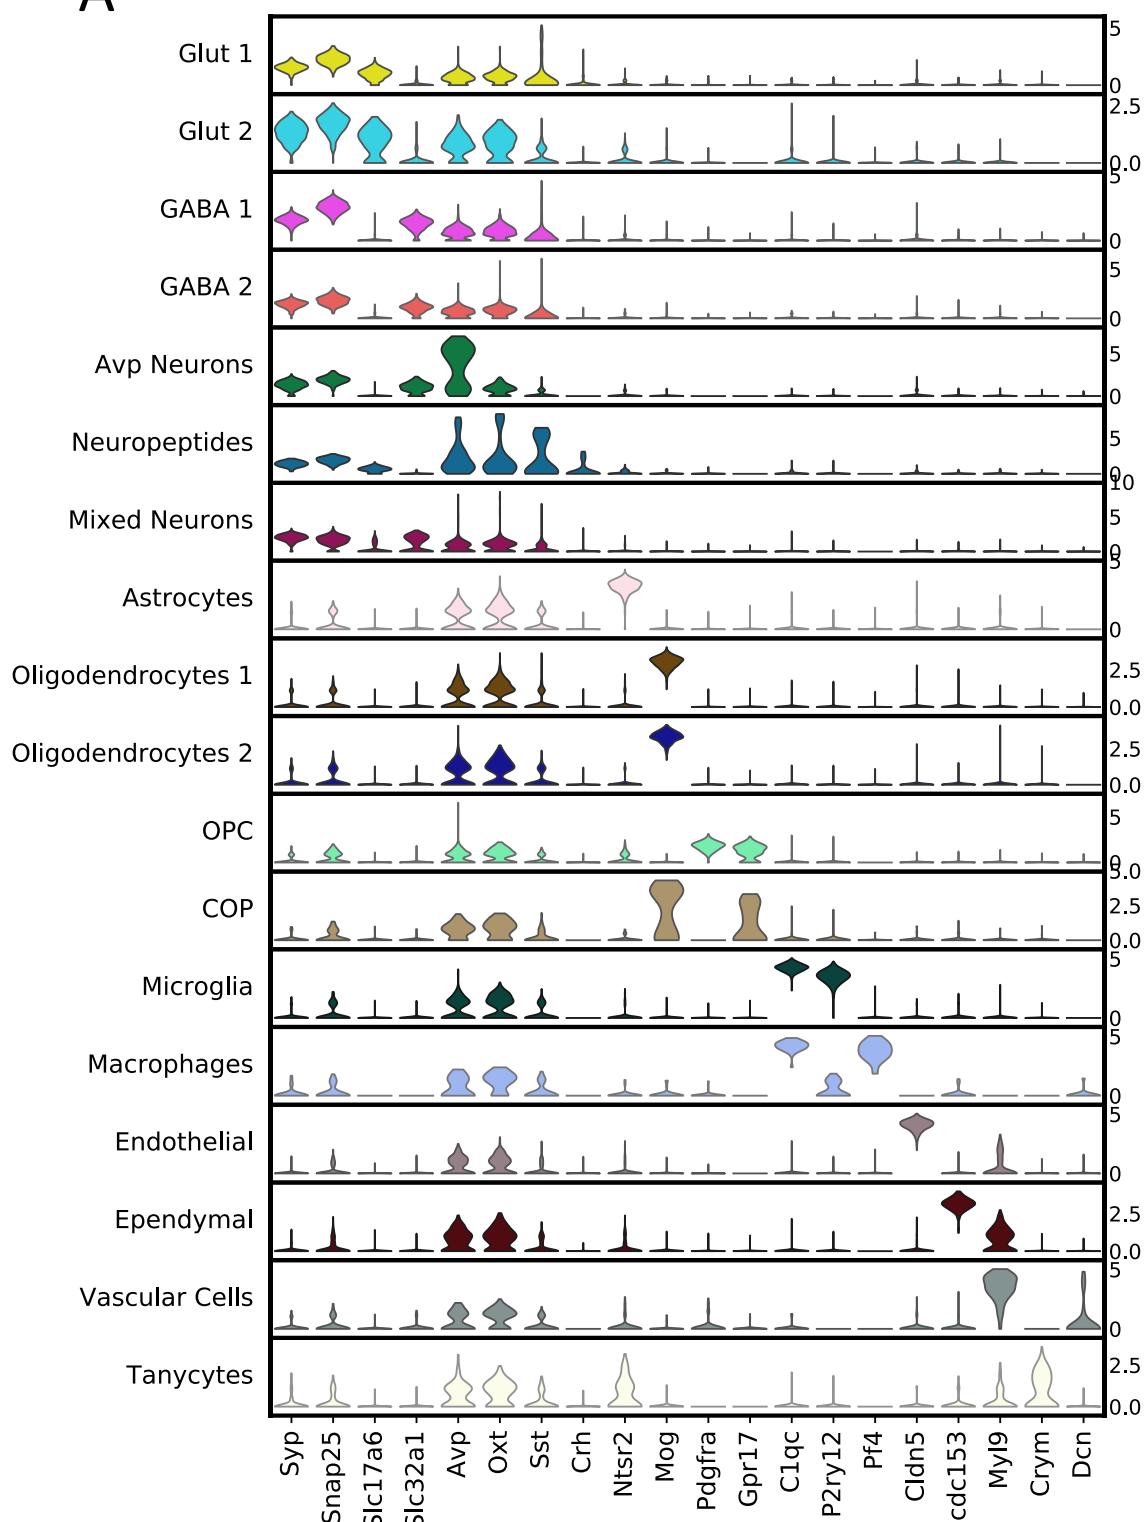

Figs. S1 to S5  
Tables S1 to S10

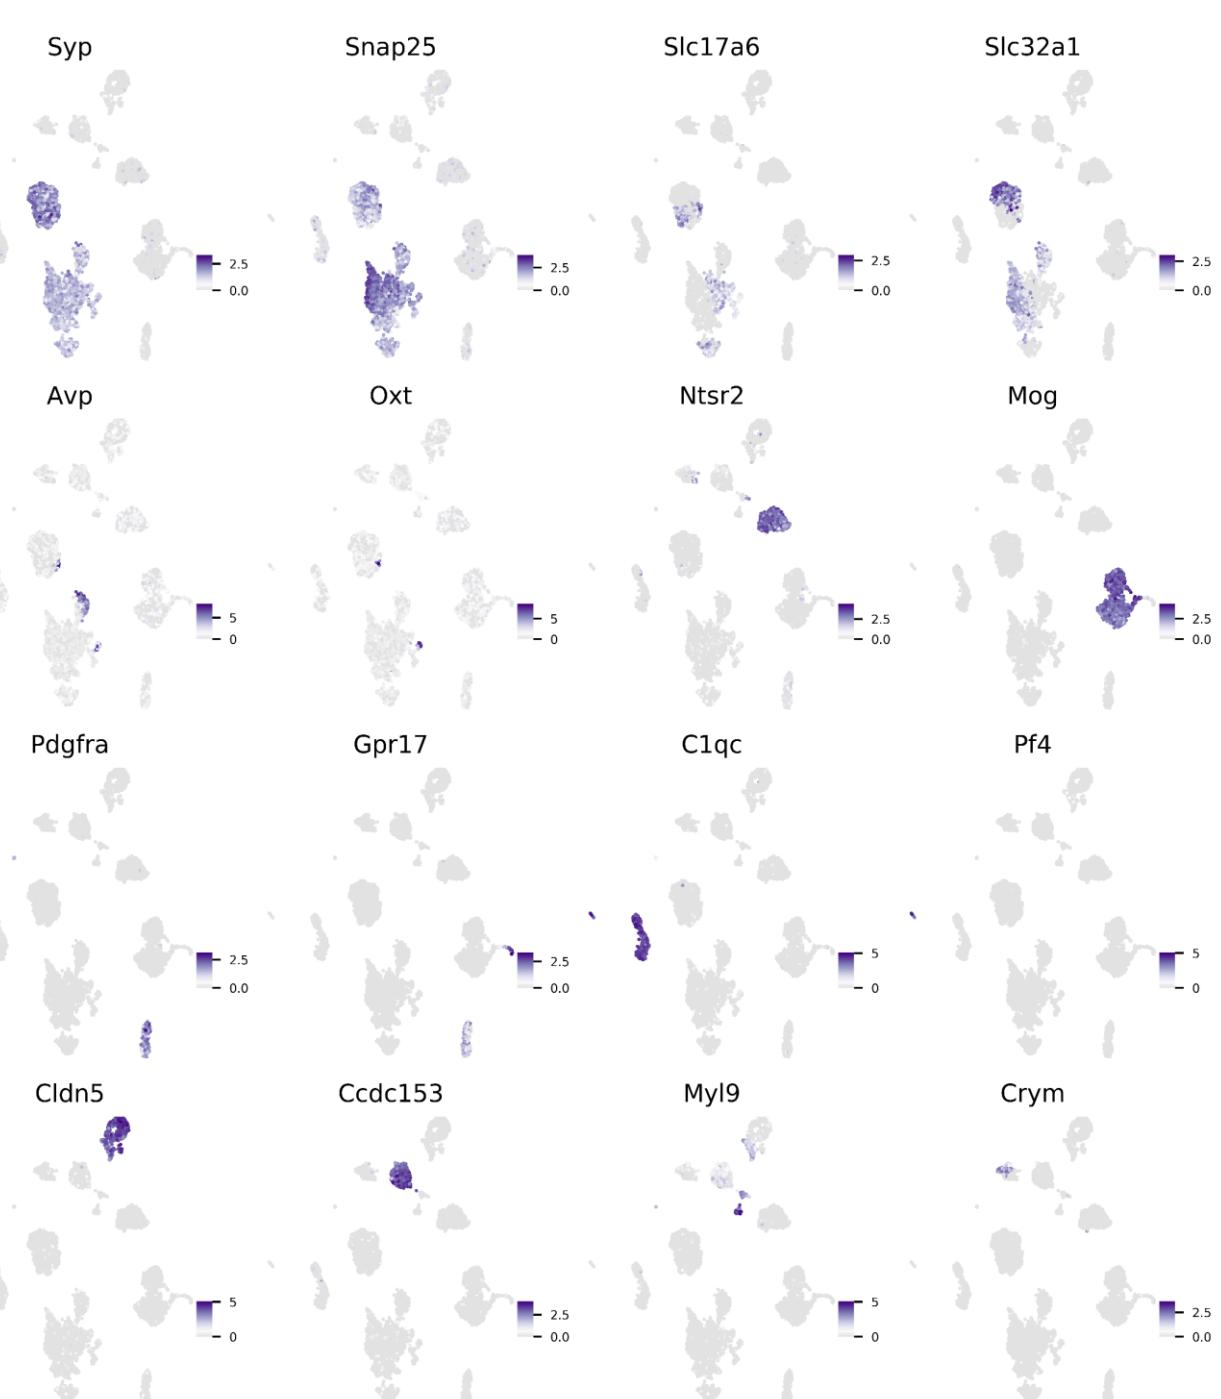

**Fig S1. Controls – Split by Social Interaction Scores.** (A) Interaction ratios in control mice during the social avoidance test. (B) High-social controls (Top 5) (N=5) and [2] Low-social controls (Bottom 5) (N=5). (C-H) There are no significant differences between the low-social (LS) and high-social (HS) controls among any of the stress variables tested: body weight, fur state, adrenal weight, CORT levels, adrenal *Abcb1* or *Sbsn* mRNA levels.

Fig. S2

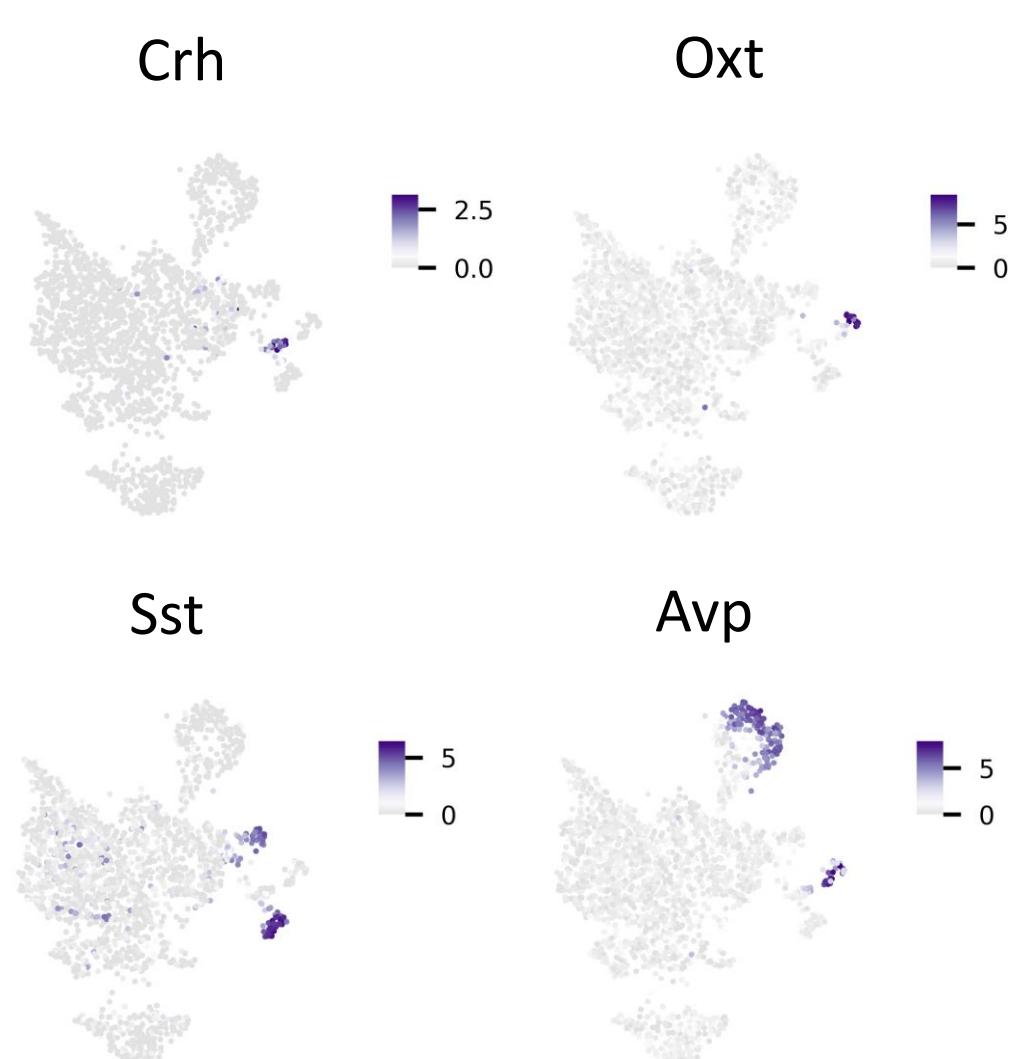

A

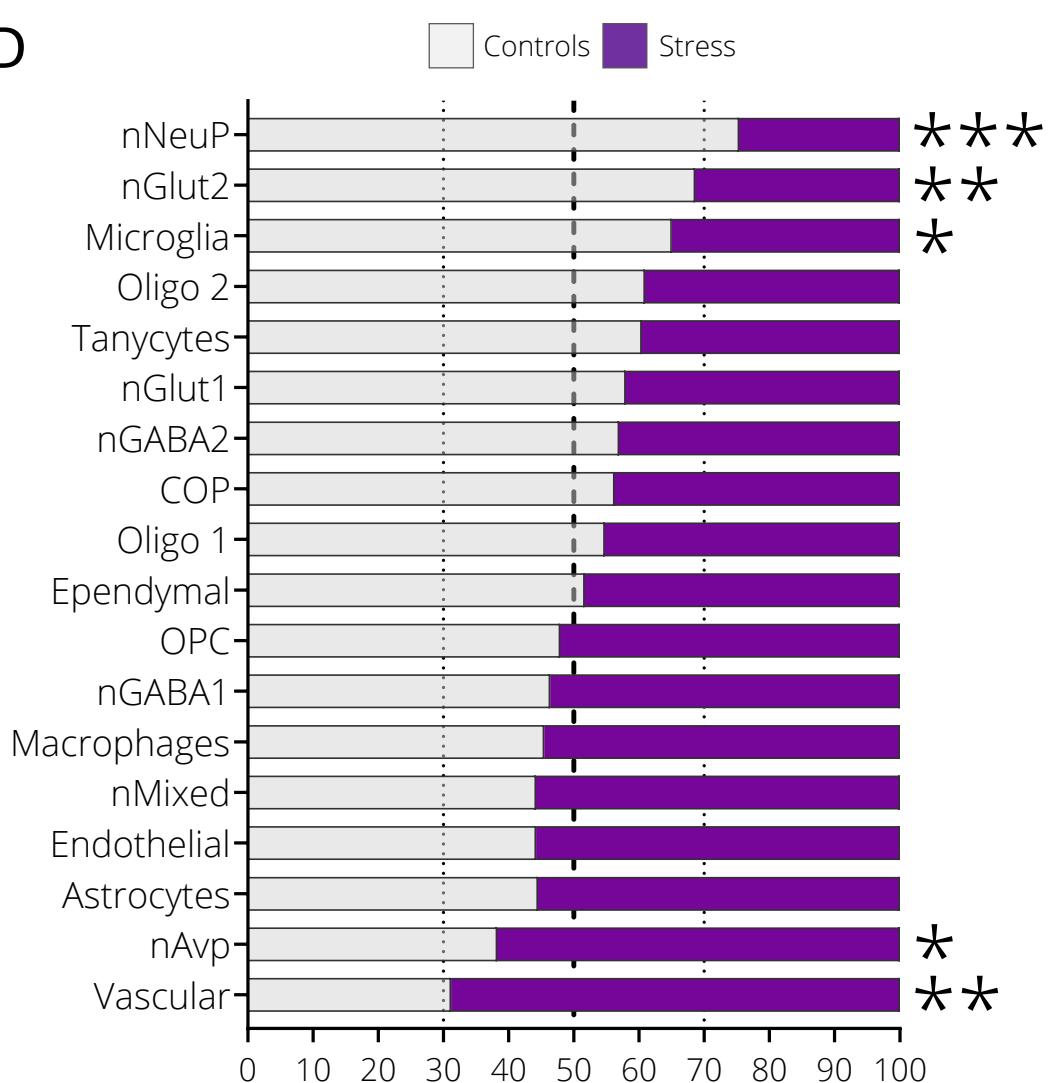

B

C

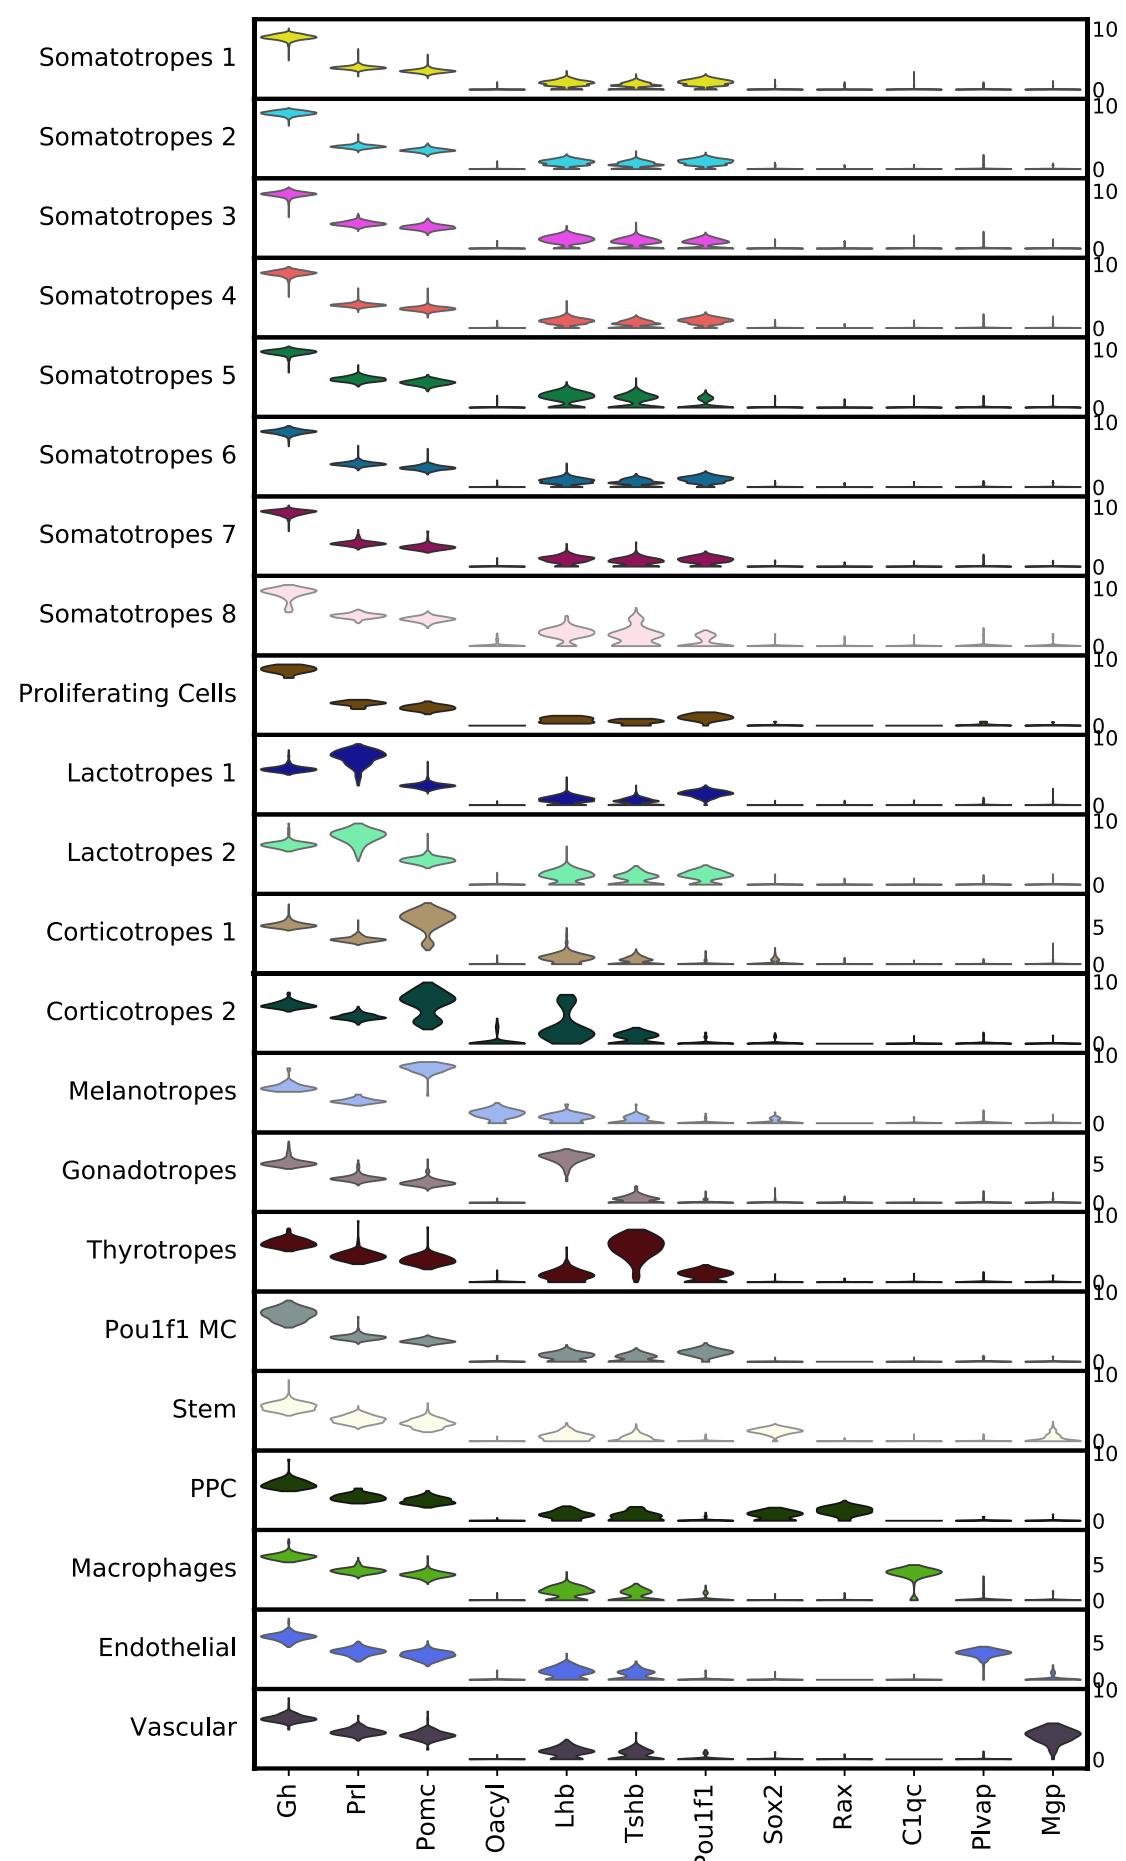

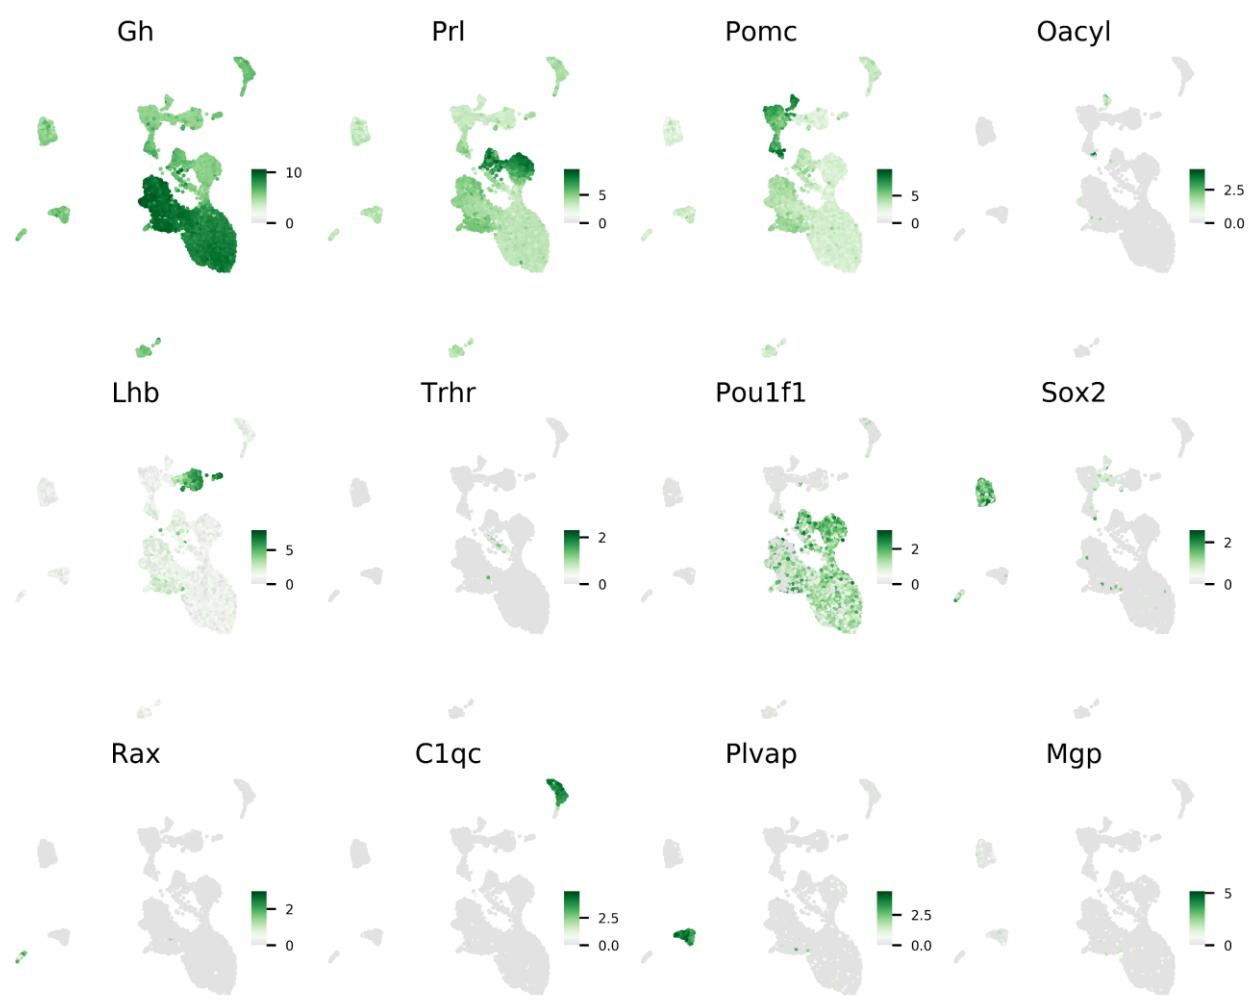

D

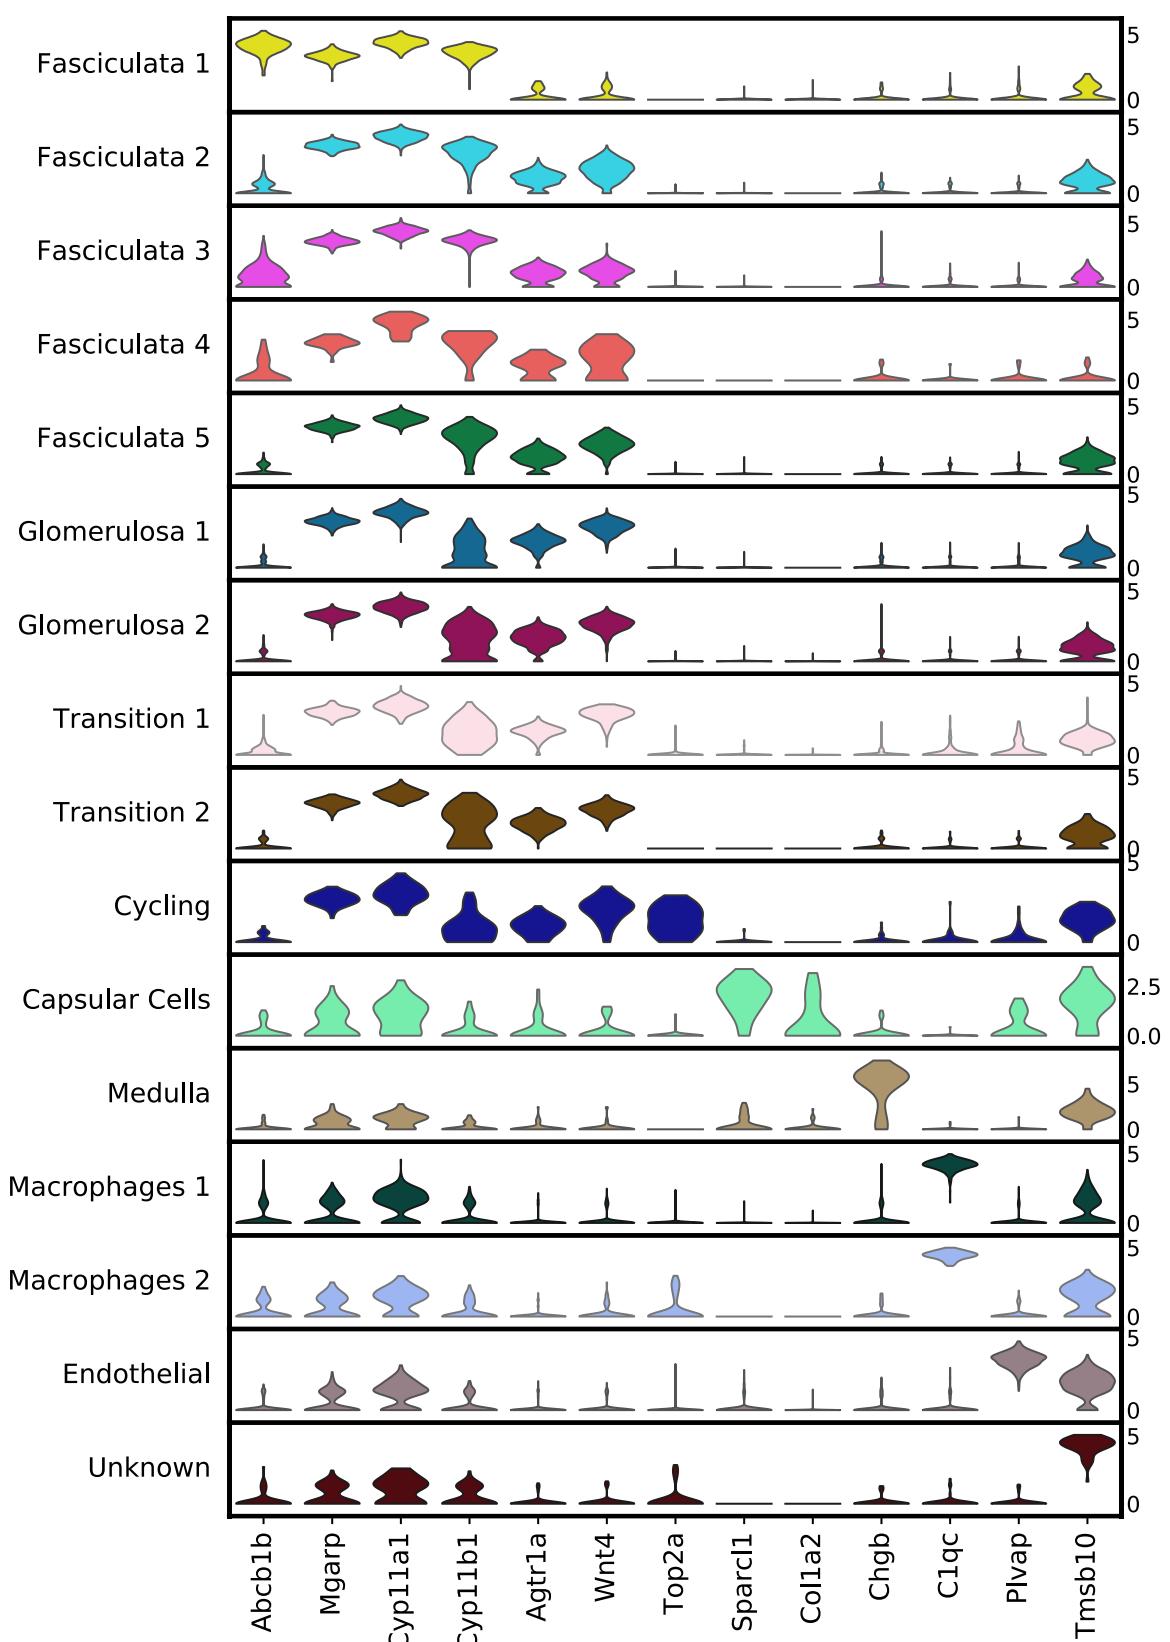

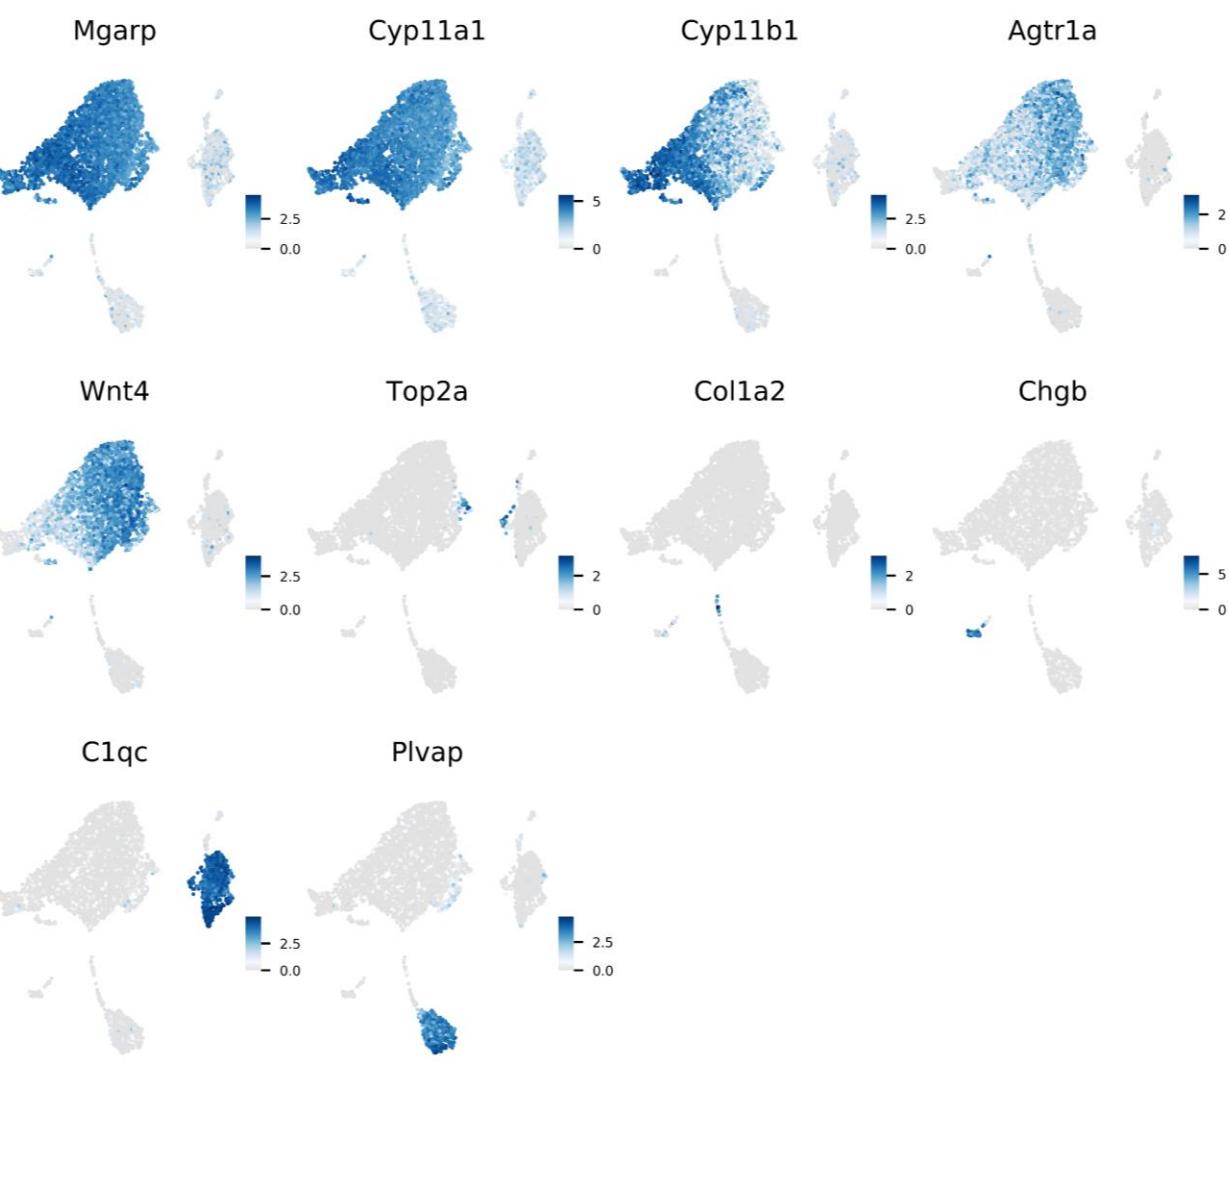

**Fig. S2: Identity of clusters – PVN.** (A) Stacked violin plots and (B) dimensionality reduction Uniform Manifold Approximation and Projection (UMAP) plots showing the expression of cell-type-specific markers. All neurons (Syp, Snap25), glutamatergic neurons (Slc17a6), GABAergic neurons (Slc32a1), neuropeptide neurons (Avp, Oxt, Sst, Crh), astrocytes (Ntsr2), oligodendrocytes (Mog), OPCs (Pdgfra), COPs (Gpr17), microglia (C1qc, P2ry12), macrophages (Pf4, P2ry12), endothelial cells (Cldn5), ependymal cells (Ccdc153), vascular cells (Myl9, Dcn), tanyocytes (Crym). (C) UMAP plots depicting the expression of known neuropeptides (Crh, Oxt, Avp, and Sst) in the PVN. (D) Distribution of Nr3c1 positive cells by cluster in each condition (control vs. stress). Bars represent the percentage of Nr3c1 positive cells from the control and stressed group per cluster (0-100%). All controls (grey) and PVN (purple). Fisher's exact test \*p<0.05, \*\*p<0.01, \*\*\*p<0.001.

Fig. S3

**A****B**

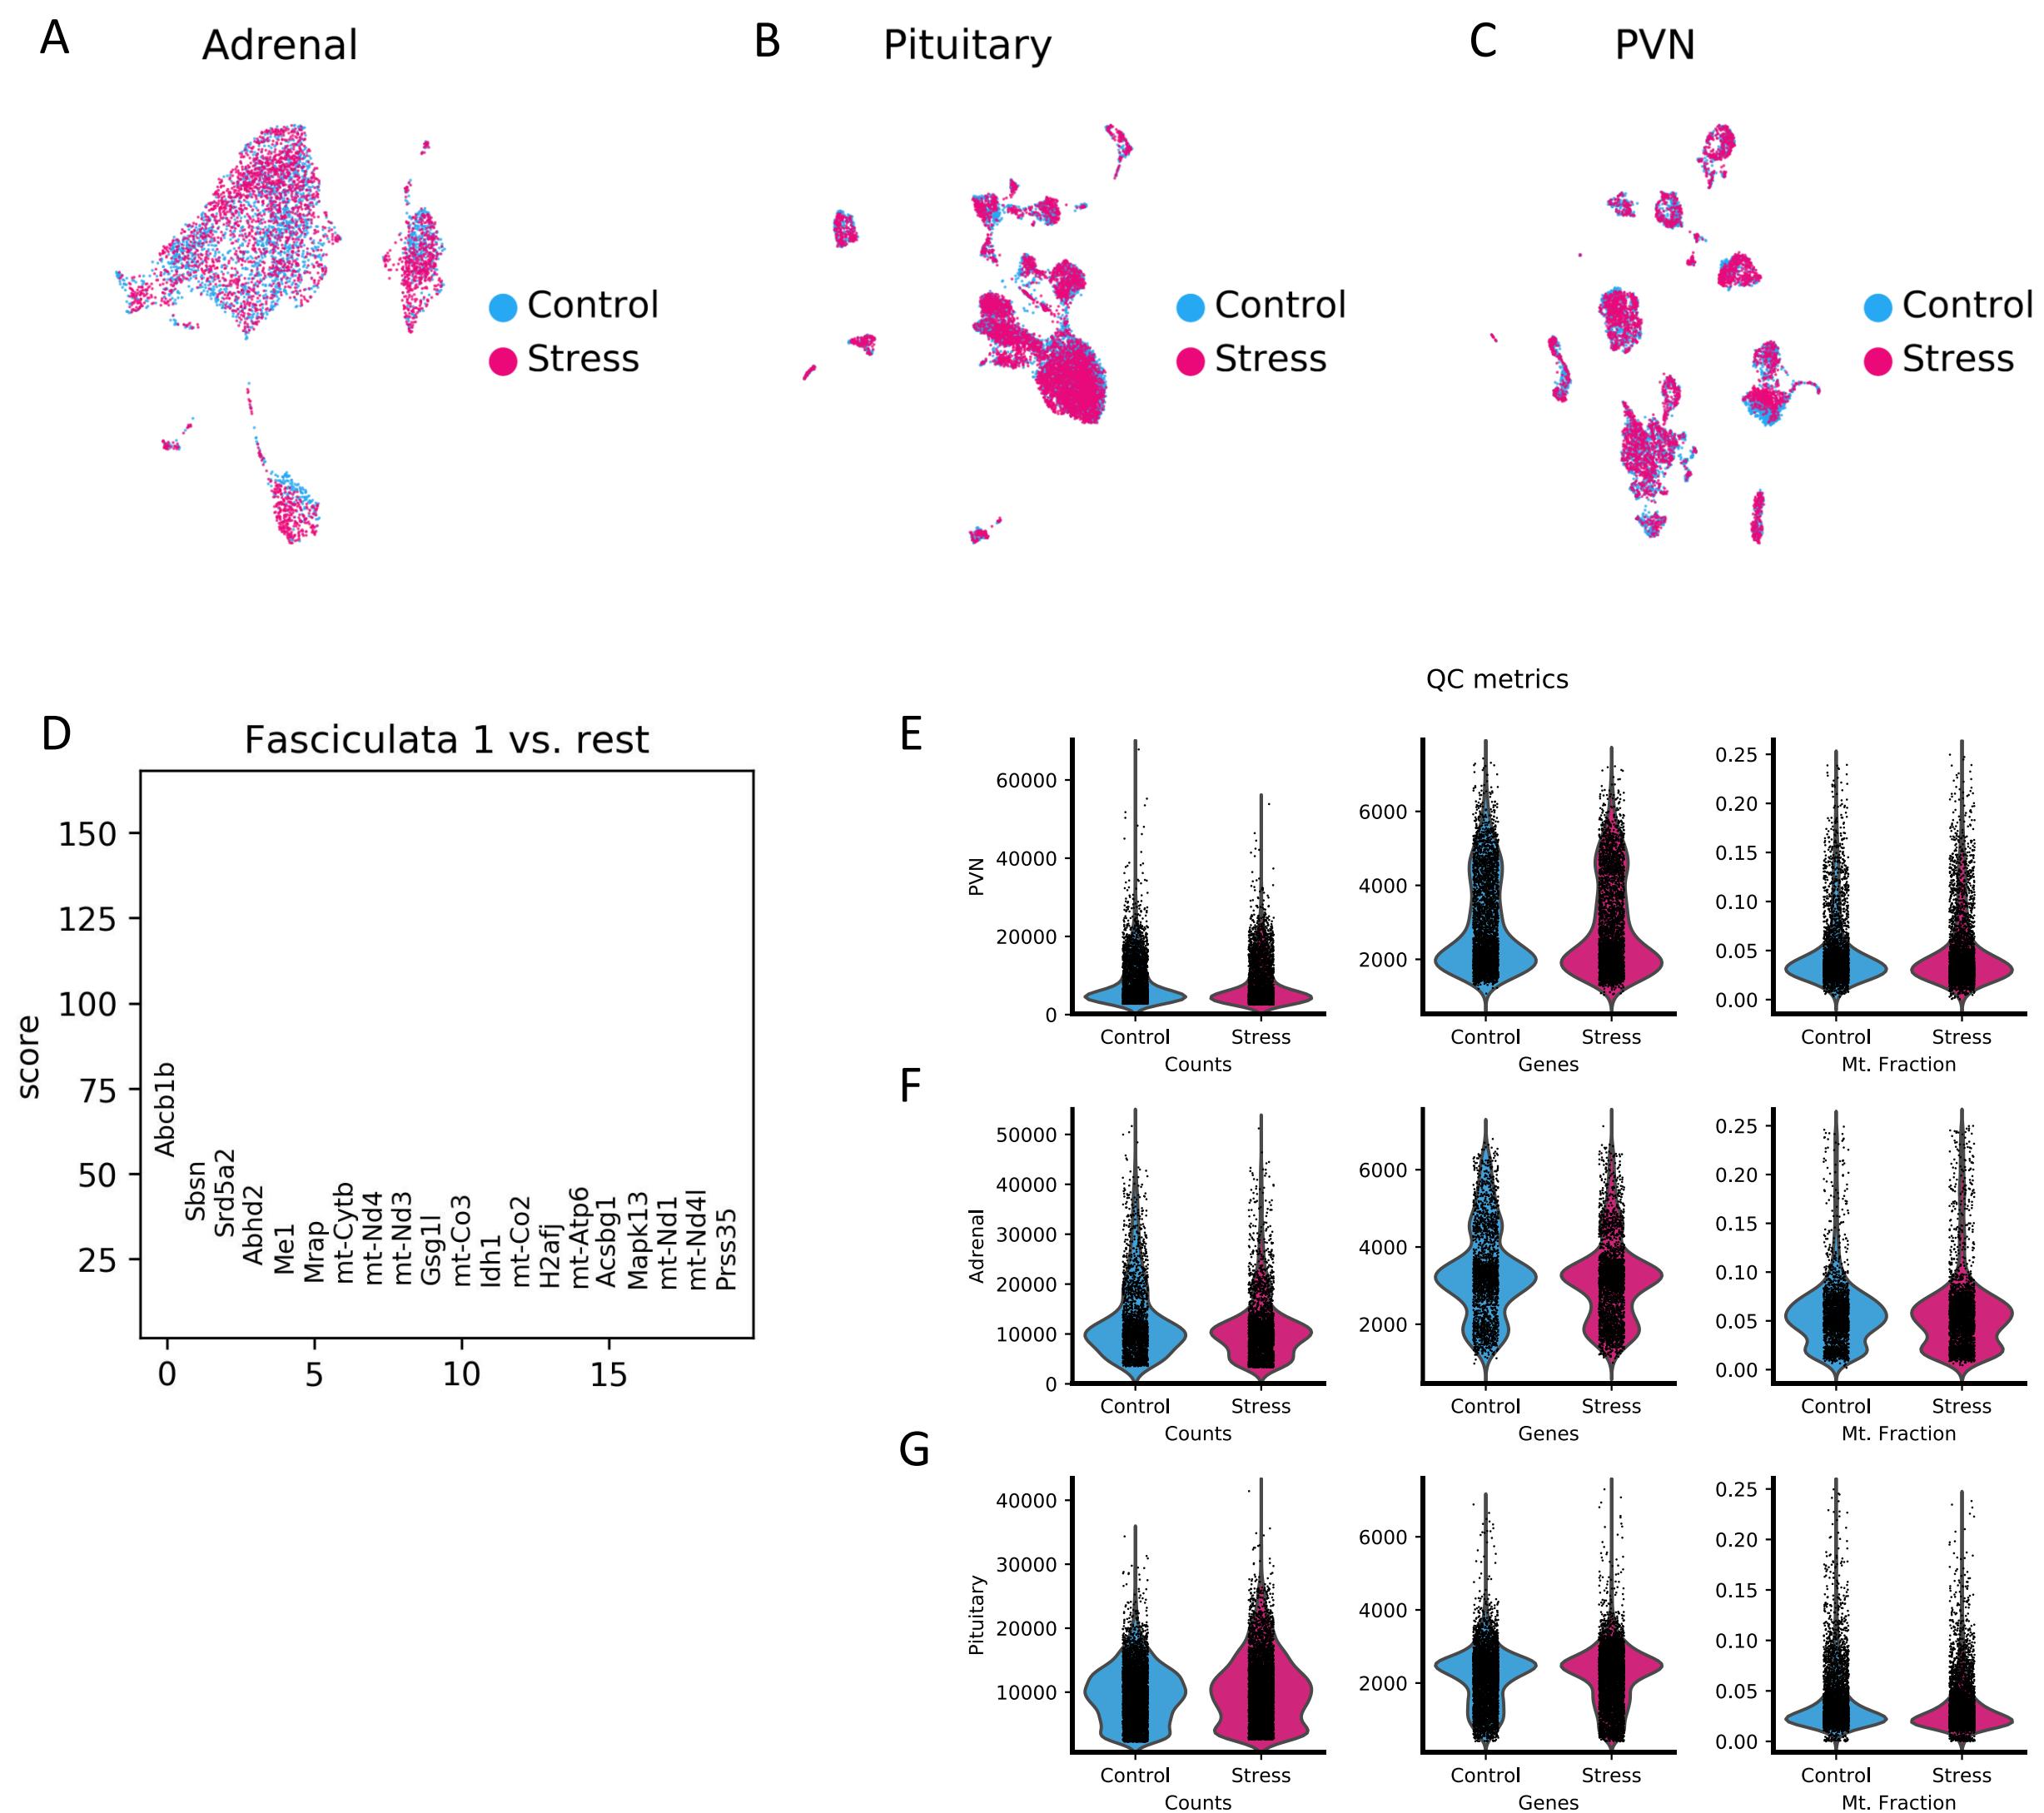

**Fig. S3: Identity of clusters – Pituitary gland.** (A) Stacked violin plots and (B) dimensionality reduction Uniform Manifold Approximation and Projection (UMAP) plots showing the expression of cell-type-specific markers. Somatotropes (*Gh*), lactotropes (*Prl*), corticotropes (*Pomc*), melanotropes (*Oacyl*), thyrotropes (*Lhb*, *Tshb*), Pou1f1-expressing mixed cells (*Pou1f1*), stem cells (*Sox2*), posterior pituitary (*Rax*, *Sox2*), macrophages (*C1qc*), endothelial cells (*Pvalp*), vascular cells (*Mgp*).

Fig. S4

**A****B**

**Fig. S4. Identity of clusters – Adrenal gland.** (A) Stacked violin plots and (B) dimensionality reduction Uniform Manifold Approximation and Projection (UMAP) plots showing the expression of cell-type-specific markers. Adrenocortical cells (*Mgarp*, *Cyp11a1*), zona fasciculata cells (*Cyp11b1*), zona fasciculata-1 cells (*Abcb1b*), zona glomerulosa cells (*Agtr1a*, *Wnt4*), proliferating cells (*Top2a*), capsular cells (*Sparc1*, *Col1a2*), adrenomedullary cells (*Chgb*), macrophages (*C1qc*), endothelial cells (*Pivap*).

Fig. S5

**Fig. S5. Quality Control (QC) plots.** (A-C) UMAP plots showing the distribution of all cells by condition: Control (Blue), Stress (Magenta). (D) Plot shows the top 20 genes that define the zona fasciculata 1 cluster in the adrenal gland. “Score” refers to the z-score underlying the computation of a p-value for each gene for each group (cell type) as compared to every other cell type. (E-G) Violin plots showing the distribution of number of genes, number of counts and percentage of mitochondrial fraction in all three tissues (E) PVN, (F) Pituitary, (G) Adrenal gland. Cells were filtered out if (1) less than 1,000 counts, (2) less than 400 genes detected, and (3) percentage of mitochondrial gene counts higher than 25%. Additionally, genes expressed in less than 20 cells were removed as well.

**Table S1:** Expression of the top 100 genes defining individual clusters in the PVN

PVN Clusters - Top100 Genes
