Abbreviations: LUAD, lung adenocarcinoma; LUSC, lung squamous cell carcinoma.

<sup>1</sup> ICR: the Institute of Cancer Research Genome-wide Association Study, UK;

<sup>2</sup> MDACC: the MD Anderson Cancer Center Genome-wide Association Study, US;

<sup>3</sup> IARC: the International Agency for Research on Cancer Genome-wide Association Study, France;

<sup>4</sup> NCI: the National Cancer Institute Genome-wide Association Study, US; this study was composed of four GWASs: the Alpha-Tocopherol, Beta-Carotene Cancer Prevention Study (ATBC), the Cancer Prevention Study II Nutrition Cohort (CPSII), the Environment and Genetics in Lung Cancer Etiology (EAGLE) and the Prostate, Lung, Colon, Ovary Screening Trial (PLCO).

<sup>5</sup> Toronto: the Lunenfeld-Tanenbaum Research Institute Genome-wide Association Study, Toronto, Canada;

<sup>6</sup> GLC: German Lung Cancer Study, Germany;

<sup>7</sup> Harvard: Harvard Lung Cancer Study, US;

<sup>8</sup> deCODE: Icelandic Lung Cancer Study, Iceland

**Supplementary Table 2. Discovery of SNPs associated with lung cancer risk in TRICL-ILLCO with FDR < 0.2**

Abbreviations: SNP, single nucleotide polymorphism; Chr, Chromosome; MAF, minor allele frequency; OR, odds ratio; CI, confidence interval; FDR, false discovery rate; hete, heterogeneity test.

a. Effect allele/Reference allele.

b. Adjusted for top principle components.

c. Genetic variant was previously reported to be associated with lung cancer risk (1) or existed linkage disequilibrium ( $r^2 > 0.1$ ,  $D' = 1$ ) with previous reported SNP associated with lung cancer risk according to data obtained from Pubmed (2).

d. The new dbSNP ID of rs115037049 is rs356969.

**Supplementary Table 3. the overall imputation info/RSQ of the SNPs in the eight TRICL GWASs**

rs_number	info_s1	RSQ_s2	RSQ_s3	info_s4	info_s5	rsq_s6	rsq_s7	info_s8
rs329118	0.95636	0.951	0.9556	0.9729	0.95862	0.958	0.99707	0.96473

<sup>a</sup> <https://snpinfo.niehs.nih.gov/cgi-bin/snpinfo/snpfunc.cgi>; <sup>b</sup> <http://www.regulomedb.org/index>; <sup>c</sup> <https://pubs.broadinstitute.org/mammals/haploreg/haploreg.php>

**Supplementary Figure 1. (a)** Forest plots of rs329118; **(b)** rs2285521; **(c)** rs198459, which present the overall and stratification results of the three SNPs by histological types (adenocarcinoma and squamous carcinoma) and smoking status (ever and never). Note, in the stratification result by smoking status, the NCI study was composed of four sub-studies: the Alpha-Tocopherol, Beta-Carotene Cancer Prevention Study (ATBC), the Cancer Prevention Study II Nutrition Cohort (CPS-II), the Environment and Genetics in Lung Cancer Etiology (EAGLE), and the Prostate, Lung, Colon, Ovary Screening Trial (PLCO).

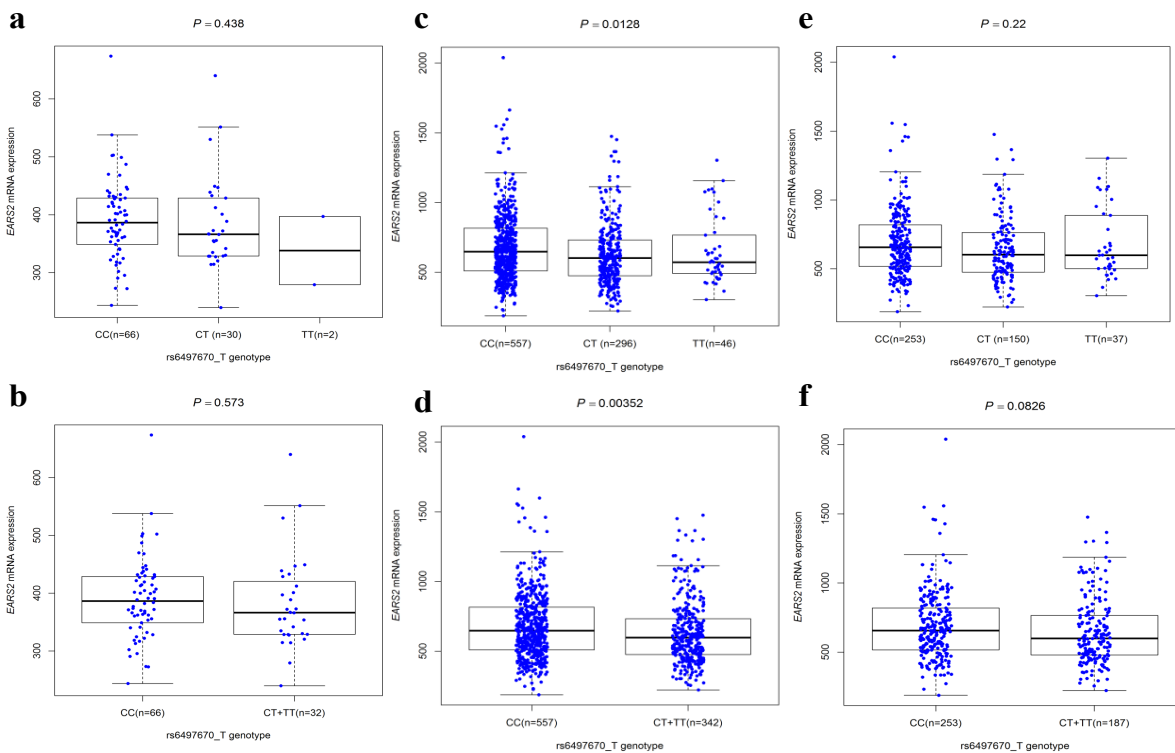

b

# C

**Supplementary Figure 2.** Correlation between *GGA2* rs2285521 and the mRNA expression of *GGA2*. **a-f** Boxplot elements: *P* value was calculated from linear regression. Center-line indicates the median expression level across all participants in that group, and the hinges represent the lower (Q1) and upper (Q3) quartile, with lower whisker indicating the smallest value within 1.5 interquartile range (IQR) below Q1 and upper whisker indicating the largest value within 1.5 IQR above Q3 (**a-f**). *EARS2* rs6497670 in LC tissues from TCGA project (*GGA2* rs2285521 T>C exists complete LD with *EARS2* rs6497670 C>T): in additive and dominant models in lung cancer adjacent tissues (*P* = 0.438 and 0.573, respectively) (**a, b**); in additive and dominant models in NSCLC (LUAD and LUSC) tissues (*P* = 0.0128 and 0.00352, respectively) (**c, d**); in additive and dominant models in LUAD tissues (*P* = 0.22 and 0.0826, respectively) (**e, f**).

**Supplementary Figure 3.** Different mRNA expression analysis using data from the cancer microarray database (Oncomine: <https://www.oncomine.org>) showed the expression level of *JADE2*, *MYRF*, and *GGA2* in both LUAD and LUSC compared with normal tissues. **a, b** *JADE2* in LUAD ( $P = 0.039$ ) (**a**) and in LUSC ( $P = 0.003$ ) (**b**); **c, d** *GGA2* in LUAD ( $P = 2.83E-15$ ) (**c**) and in LUSC ( $P = 5.66 E-12$ ) (**d**); **e, f** *MYRF* in LUAD ( $P = 4.43E-10$ ) (**e**) and in LUSC ( $P = 1.29E-26$ ) (**f**). **a-f** Boxplot elements:  $P$  value was calculated from linear regression. Center-line indicates the median value across all participants in that group, and the hinges represent the lower (Q1) and upper (Q3) quartile, with lower whisker indicating the smallest value within 1.5 interquartile range (IQR) below Q1 and upper whisker indicating the largest value within 1.5 IQR above Q3.
