

**Supplementary Table 1:**

Multivariate analysis using Cox proportional hazard model for metastasis-free survival.

	Cut off	HR	95% CI	<i>P</i> -value
Maximal tumor size (mm)	>74mm (vs =< 74mm)	14.02	(1.263 - 155.7)	<b>0.032</b>
Mutation status	<i>SDHB</i> mutation (+) (vs (-))	18.11	(1.636 - 200.5)	<b>0.018</b>

Abbreviations HR, hazard ratio; CI, confidence interval. *P*-values of less than 0.05 were

considered significant and shown as bold.
